# NEC Integrated Broadcasting Systems Go Places.

All-Transistorized 4½ inch
IMAGE ORTHICON CAMERA CHAINS

## Any Place.

NEC, Japan's leading telecommunications and electronics manufacturer, has designed and installed integrated broadcasting systems like radio-TV stations and earth stations for the coming INTELSAT global communications network all over the earth.

NEC meets any requirement in this field—from compact transistorized studio equipment, VHF and UHF transmitters and antennas, down to microwave relay facilities. All NEC equipment is easy-to-maintain, has easy access and minimum power consumption. All NEC equipment meets highest international standards set by organizations like FCC and CCIR.

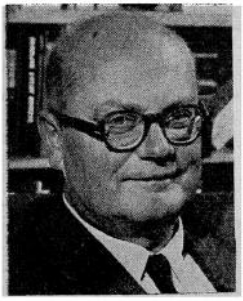
# PREFACES



Sir Hugh Green

In the three years since I last contributed a preface to your Handbook the BBC has made great progress on several fronts. When I last wrote it had just opened its second television channel. BBC-2 is now an established feature of the television scene in Britain, providing programmes which are planned to contrast strongly with those on BBC-1 and offering a wide range of choice to those who have access to both channels. Its transmitter network has advanced rapidly across the country, bringing BBC-2 to more than two thirds of the population of the United Kingdom by the end of 1967. Meanwhile BBC-2 has become the vehicle for the first colour service in Europe. Its colour programmes opened last July, with the exciting spectacle of the Wimbledon Lawn Tennis Championships, and there were regular colour transmissions throughout the warming up or launching period that followed. One historic live programme was the colour presentation of the Golf World Series from Akron, Ohio. It reached colour viewers in the United Kingdom by way of 50,000 miles of communications channels, including a satellite relay, and the quality of the reception augured well for live colour relays from the Olympic Games in Mexico City. The relay had to pass from one colour system to another and from one field frequency to another. This last process was only possible because the BBC's engineers had developed unique equipment for the purpose — the field store standards converter. And so we hope that colour services throughout Europe will be able to show the Olympic Games next year for the first time live in colour.

These are truly momentous years for all who work in international communications. Only a few months ago the BBC had the privilege of co-ordinating the remarkable live global hook-up called "Our World". It conducts a flourishing export business in television programmes, dubbed and undubbed. It maintains External Services which not only broadcast in 40 languages but have transmissions re-broadcast in more than one hundred different countries. The World Service, broadcasting in English round the clock seven days a week, not long ago received more than 2,000 entries from 108 countries for one short story competition. The new transmitters on Ascension Island were of immediate benefit to the services broadcasting to Africa and South America.

At home the BBC's radio networks have not been standing still. A fresh approach to the presentation of news and current affairs programmes has given a new stimulus to the medium, and the third radio network — known now as Radio 3 — has provided a daily service of classical and modern serious music to supplement the musical output of its Third programme (a thriving 21-year-old) and the Home Service (Radio 4). At the other end of the spectrum of musical taste the Light Programme has divided itself into two parts, of which one is a particularly lively and up-to-the-minute service of popular music — Radio 1. It is offered to those who enjoyed the illicit delights of offshore broadcasting during the brief heyday of the pirates. Meanwhile the BBC is taking part in a new experiment in community radio. Eight stations are involved, each with a station manager and personnel from the BBC, each with a Local Broadcasting Council, representative of local interests. Local radio, with all its possibilities of service to single closely-knit communities, has long been desired by the BBC. At one time we hoped to be allowed to introduce local radio entirely under our own management, but in the current experiment, into which the BBC has entered without reserve and with enthusiasm, the responsibility is shared with local bodies. I hope that I have said enough in this preface to show that the BBC continues to be inventive and supple, as a living and growing organism ought to be. It approaches the fiftieth birthday of the birth of public service broadcasting in Britain (in 1972) with every confidence that it will be good for another fifty years at least of active pioneering.

I hope that the World Radio Television Handbook will be with us throughout our journey.

*Hugh Greene, Director-General, B.B.C., London.*

C. R. Delafield

It is an honour for me to contribute a preface to the World Radio and TV Handbook on behalf of the CBC International Service. Here at our headquarters in Montreal, we have long since come to regard WRTH as the definitive reference book in the field of international broadcasting.

Radio-Canada has just completed the most exciting and the most rewarding period in its twenty-two year history. During 1967, the attention of the world was focused on Canada as this country celebrated the hundredth anniversary of Confederation. The CBC International Service was the only broadcasting organization that was giving continuous, day by day, coverage of Expo 67 and our Centennial festivities to a world wide audience. Reporters from the various language sections travelled from one end of Canada to the other to describe centennial events such as the Pan-American Games and the Voyageur Canoe Race and reported the many visits of foreign statesmen and dignitaries. The spectacular achievement that was Expo '67 was covered fully together with the concentration of artistic and cultural events which took place in Montreal. We hope that we were able to convey to our audience a sense of the enthusiasm and pride that Canadians felt during their Centennial Year.

The CBC International Service was officially inaugurated in 1945 with the stated aims of projecting Canada to listeners in other countries, of stimulating

(continued from page 2)

trade between Canada and other countries and of providing Canadian soldiers then abroad with news and entertainment from home. Radio-Canada now broadcasts daily in eleven languages and operates growing television and transcription services. The Service's three 50-kilowatt shortwave transmitters will soon be replaced by five 250 kilowatt transmitters which should greatly improve our reception in many parts of the world.

As Canada enters her second century, the CBC International Service is even more enthusiastic about its task of making our country better known and better understood in other lands.

*C. R. DELAFIELD*
*Director International Service*

Ahmed Taher

It is a pleasure to contribute a preface on behalf of the Union of National Radio and Television Organisations of Africa in this new edition of WRTH. I have been using this handbook since I have been in the field of broadcasting, which dates back to almost two decades.

As the World Radio TV Handbook comes to age by this years edition, I would like to congratulate the Admizistration and editors in charge for the splendid work they have been doing. This handbook which bears no resemblance to any other publication is unique in the field of broadcasting and many a time, I have relied upon its authentic information in my work as Secretary General of URTNA, and as a Director General in the Egyptian Broadcasting.

Like any other Union, URTNA feels that contact between broadcasters is of great importance in helping the peoples to achieve peace and stability. When our Union came into existence and that was in 1961-1962, the peoples of Africa welcomed its creation for they wanted to have a Union of their own where they can work together towards the betterment of their continent conditions after a very long period of forced separation and mutual history and aspirations. This common history and living conditions made it imperative for the broadcasters to become the flag bearers of African Unity for they are the people responsible for enhansing their public opinion to:

a) support in every field the interests of those African organisations operating Radio and/or Television Services to establish with other international organisations.
b) promote and co-ordinate the study of all questions relating to broadcasting and to secure the exchange of information on all matters of general interest to those radio and/or television services.
c) take all possible steps designed to assist the development of African Radio and Television in all its forms.
d) seek within the framework of African co-operation, the solution to any differences that may arise among members and to work for co-operation among the Radio and Television Organisations and to promote African culture in accordance with African Unity Charter.
e) use its good offices to ensure respect by all members for the provisions of international and inter-african agreements relating to all aspects of Radio and Television.

These are aims of our Union and Member Organisations.

*AHMED TAHER*
*Secretary General, URTNA*

Dr. J. Sollari Allegro

It is a matter of general consent that the main purpose of broadcasting is to bring people together but there is perhaps no country that is more aware of the force of this statement than Portugal, for her people are scattered over five continents many thousands of miles apart.

That the Government realized this is quite obvious from the wording used in the original Law that established our organization in 1928. The main purpose was defined in the preamble as being to bring the Voice of Portugal to all corners of the Portuguese World, thus establishing a precedent in the simultaneous foundation of a medium and a short wave service. Some idea of the problems that this involved can be gleaned from the fact that, only ten years later, Marshal Carmona, the President of the Republic, visited Angola and Mozambique in Africa and people in Continental Portugal enjoyed direct reports on each stage of his journey.

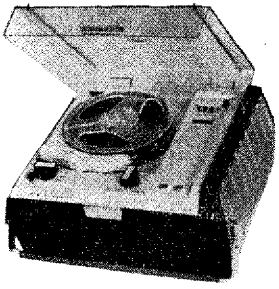
A great deal has happened since then but the Emissora Nacional de Radiodifusão — to give our organisation its official title — has always remained essentially the same: the main broadcasting body in Portuguese territory financed almost entirely by funds obtained from wireless licences.

The international service which adopted the name of Radio Portugal to obviate the problems involved with translations of the official title was founded in 1954 and from the outset enjoyed the benefit of the experience gained by the original short wave service. In the last ten years it has constantly grown in stature to the point where it now broadcasts twenty four hours a day in six different languages. This growth has of course led to a proportional rise in the number of listeners and, difficult though it is, to give a definite figure, there is good reason to believe that the present audience amounts to some nine or ten million people, living mainly in Europe and North America.

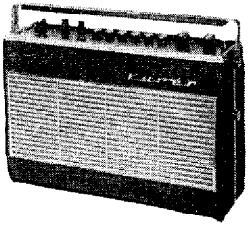
Such progress justified a complete reorganization and two years ago, a new law was passed converting the international service into a Department covering: Foreign language broadcasts; Portuguese language broadcasts to foreign countries; and a large scale Transcription and Exchange Service. Nevertheless the objectives remained the same. (continued page 12)

# FROM TV TO TAPE

## NORWEGIAN STYLE AND PRECISION ENGINEERING THROUGHOUT — THE CHOICE OF THE CONNOISSEUR.

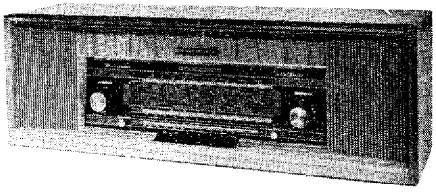


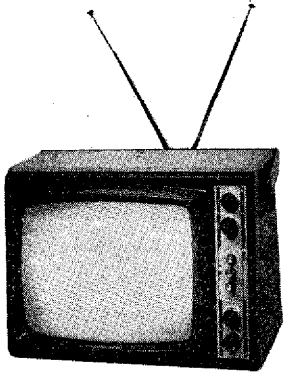
**MULTICORDER — one spool taperecorder**
This portable transistorized taperecorder has entirely new constructions in elegant design. 1 knob for immediate choice of 4 programmes. Single reel, 12 hours playing time. Supreme HiFi quality of tone. Battery operated and outlets for mains adaptor. For use everywhere, also in cars.



**KURER AUTOMATIC**
This elegant portable AM/FM model has 4 wavebands. Highest sensitivity and selectivity are the features. Stable reception on FM with AFC. Outlets for mains adaptor, extra speakers and earphones. Smart cabinets in teak, palisander, black/nickel and pastel colours.

**QUINTETT STEREO SECTION**
This handsomely designed table model has 5 wavebands incl. FM. Two STEREO amplifiers give excellent quality of tone. Tone selector key board. Outlets for pickup, extra speaker etc. Outlets for MPX.





**KURER PLANAR VHF/UHF 11" portable, fully transistorized TV**
This compact TV of highest quality, in elegant teak cabinet, is built for especially difficult reception conditions. Gives sharp pictures and brilliant sound reproduction, in the home, on the beach, wherever you are. Mains/battery operated.

**EXPLORER**
This is a portable, highly sensitive, battery operated AM-radio with 3 shortwaves plus medium and long. An all-over-the-world radio receiver. EXPLORER is beautifully finished in a vinylite covered wooden cabinet — to give the best possible sound reproduction. It has 2 built-in, highly effective loop antennas for shortwavebands and ferrite antenna for long- and medium. Great sensitivity, which makes it possible to take in faraway stations. Separate continuous bass and treble controls. Dial lamps. Outlets for extra loudspeaker, pick-up, antenna and ground. Outlet also for battery eliminator for AC mains operation. Modern printed circuits chassis with large speaker gives clear and powerful output. 5 wavebands: Shortwave III 11-29,5 Mc. — Shortwave II 5,3-14,5 Mc. — Shortwave I (Marine) 1,7-5,2 Mc. — Medium wave 510-1630 Kc. — Longwave 150-390 Kc. Weight: 1,8 kilos + batteries — Special model WORLD EXPLORER with FM-band is also available.

**RADIONETTE** has 40 years of experience on technical improvements of highest quality. The production line consists of portable radios, table- and console models, TV, taperecorders, amplifiers and mini-jukeboxes — all models great news for music lovers. Exports to 60 countries

At last! A quality microphone designed **specifically** for the ham. Incorporates features galore that hams have asked for. Tops in voice punch and intelligibility . . . and abounding in convenience features to minimize operator fatigue. Great for AM & FM transmission, unsurpassed for SSB. Check these outstanding ham-oriented features:

- "Shaped" response—cuts off sharply above 3000 and below 300 cps with a rising characteristic to the curve: gets the message through with top audio punch!
- Push-to-talk bar-switch with optional locking feature to control relay and mike muting circuits.
- Separate slide-switch gives choice of press-to-talk or VOX operation.
- Exclusive adjustable height stand for fatigue-free operation.
- Rugged Shure Controlled Magnetic element (U.S. Patent 2,454,425).
- Field replaceable cartridge and cable.
- ARMO-DUR case and stand—can't rust, peel, crack, or dent. Always comfortable to the touch.
- Shock proof.

# This is the Philips Plumbicon* Colour Television Camera

- It is the finest camera of its kind. It is being acknowledged and acclaimed throughout the world of television as the most efficient colour camera now available. Used by the world's most important broadcasting organisations, it leads its field.

- This camera is but one of many outstanding Philips achievements. The skill, knowledge, ingenuity and ability, gathered throughout more than 75 years, have made possible the wide range of Philips products and systems for radio and television broadcasting.

- Philips equipment covers the complete range from microphone to broadcast transmitter, from television camera to aerial, from line amplifier to radio link.

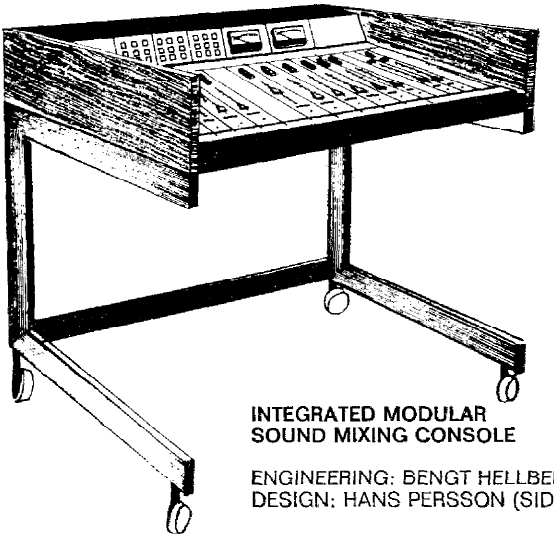
SPR



INTEGRATED MODULAR
SOUND MIXING CONSOLE

ENGINEERING: BENGT HELLBERG
DESIGN: HANS PERSSON (SID)

# AUDIO EQUIPMENT FOR STUDIO BLOCKS, THEATERS AND INFORMATION CENTRES

The mixing units designed for professional mixing and recording have been developed in close cooperation with European and American theater and recording studios. They are fully transistorized. Their modular design provides electronic equipment directly focused on individual requirements. The amplifier data comply with accepted standards for studio operation and the complete amplifier units are delivered in either mono or stereo version.

- Input stages with alternate connections for microphone/line level, bass cut off for microphone, phase switch, bass and treble correction filter and mixing selectors with no loss to the mixing bars.
- The main operating faders possess output selectors on the mixing bar for parallel connection of several outputs with equal or different signals.
- Reverberation tapping with separate level adjustment.
- Pre-listening button and tapping.
- Separate tapping after the input fader independent of mixing selector.
- Faders (DANNER/PREH etc.) or knobs delivered to customer's specification.
- Switchboards based on analoguous modular system for remote control of any further equipment.

**BASIC TECHNICAL DATA**

| | |

Many of our colleagues had occasion to gain personal experience of the services we provide during the Papal Visit to the 50th Anniversary Commemorations in Fatima, last year. The majority of obtained extremely valuable data on our organisation is from this Handbook.

In our own international service, the policy has been to implement the belief that understanding presupposes knowledge but that such knowledge can only be obtained from listening to a true picture of all the different aspects of Portuguese life and culture which is devoid of propaganda. More than one expert has said that the fate of stations suspected to dispensing propaganda is sealed before they open the microphone. The fact that Radio Portugal has been successful in this aim is shown from the large amount of correspondence which flows in to our headquarters. Listeners are always writing in to say how much they have learned from our programs and how mistaken many of them had been in their first impressions of our country. What more could an international service ask in return for their efforts?

A practical demonstration of such interest is to be seen in the number of listeners who followed the Portuguese by Radio and subsequently sat for an exam. We are now working on the preparation of a course in Portuguese Literature in an attempt to meet the constant demand. Nevertheless, the most extraordinary development has been seen in the DX Club which is quite unique in that it is essentially based on a more intimate knowledge of the Portuguese world through the award of Bronze, Silver, and Gold Certificates against specific numbers of QSL-cards obtained from the seventy different stations that now broadcast throughout Portuguese territory in five different continents. This is perhaps the best justification for our being asked to write this preface, since many thousands of listeners have been brought into contact with our station through the auspices of the WORLD RADIO TV HANDBOOK — a veritable bible to all short wave listeners.

May we therefore take this opportunity of paying our tribute to those who have worked so hard over the past twenty two years to build up this remarkable encyclopaedia of listening knowledge.

*Dr. J. Sollari Allegro, Chairman of the Board*

K. P. Shungloo

The main object of AIR's external broadcasting is to present the Indian point of view on current, domestic and international affairs and to acquaint listeners in other countries with the various facets of Indian life and thought. When we comment on international affairs we do it with a frank recognition of different views. We give our listeners the facts upon which they can form. their own opinions And we seek co-operation and try to strengthen ties of friendship through our programmes.

The first AIR broadcast for listeners outside India was made on October 1, 1939. We now broadcast daily in twenty-one languages for a duration of forty-four hours and thirty five minutes. The languages include Arabic, Afghan-Persian, Burmese, Chinese, French, Indonesian, Nepali, Pushtu, Persian, Sinhala, Swahili and Tibetan. We propose to add Russian and Malay to the schedule of languages

The General Overseas Service in English is on the air for nine hours and forty-five minutes every day. It is broadcast in four transmissions for different parts of the world.

There are daily services in Urdu and Bengali for listeners in the sub-continent. Other Indian languages used by us are Hindi, Tamil, Gujarati and Konkani for Indians or persons of Indian origin living abroad.

Each language service is planned to offer listeners news, comment, talks on topics of general and cultural interest and documentary programmes and Indian music.

Recordings are supplied to about eighty organisations abroad on request or as part of programme exchange requirements.

For those of us engaged in external broadcasting the WRTH is a very useful publication. I wish it success.

*K. P. Shungloo, Director of External Services, All India Radio, New Delhi.*

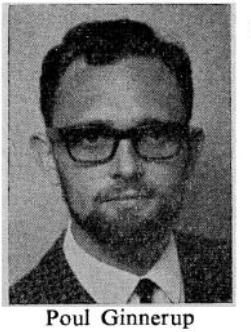
Daniel Söderman

As a representative for the most eager users of the World Radio TV Handbook — the DXers — it gives me a great pleasure to contribute with a short preface for the 1968 edition of this outstanding handbook.

There are many DX-clubs in the world, all with somewhat divergent interests and aims. Finlands DX-Club, with its recently established international subsidiary Finlands DX-Club International—The Friendly DX-Club—has always worked for a better co-operation between the DXers and the broadcasting stations. This can only be accomplished by a systematic training of the DXers, with special emphasis laid on the responsibility each DXer must feel by furnishing stations with detailed and trustworthy reception reports. In this work we have had invaluable help from the World Radio TV Handbook, the world's only complete guide for DX-enthusiasts.

We rest assured that the World Radio TV Handbook will continue to flourish, thus giving the DXer a sound basis for his hobby.

*Daniel Söderman, President, Finland DX Club*



Poul Ginnerup

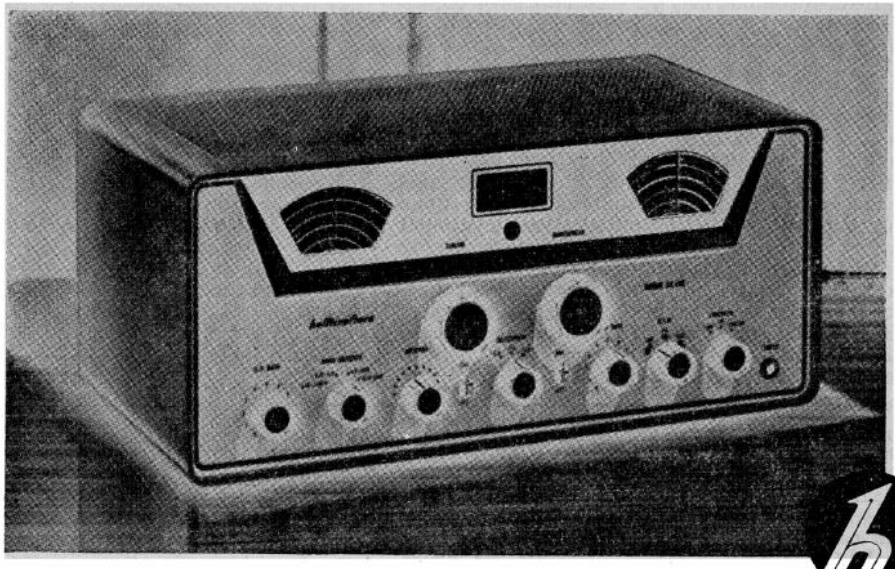
A major blow was struck in the cause of international radio as a living hobby to countless persons throughout the world, when the WORLD RADIO TV HANDBOOK first appeared years ago — and during its more than two decades of existence the WRTH has amazingly been able to extend, improve, correct and bring completely up-to-date its valuable contents of information. *(to page 14)*

# *Once you own a Hallicrafters...*

**You gain a deeply satisfying new perspective on world events as you hear them reported in detail direct from Moscow. . .** **Washington . . . Saigon . . . New Delhi—and with as many different viewpoints. You listen with renewed hope as the Voice of America, Radio Free Europe and radio amateurs** **(perhaps a neighbor) melt the Iron Curtain with words of warm friendship and cold fact. Mysteriously, your children begin to pronounce the difficult foreign names like natives, and attack their language study** **with new vigor. Frequently you pause in your dial-roaming to eavesdrop on military and civilian aviation** **or marine communications** **and, on rare occasions, a suspense-filled emergency. There is no more effective way to stay informed. For this is a Hallicrafters you own. A unique and incomparable new Information Center for a thoughtful man's home.**

**hallicrafters**

*where the new ideas in communications are born*



*SX-122 General Coverage Receiver.* You can own one of these remarkable Hallicrafters precision communications instruments. No other type of short wave receiver can bring you such satisfactory, understandable world-wide reception. Complete coverage from .54 to 34 MHz. Dual conversion. Calibrated bandspread dial. "S" Meter. Professional-type electrical bandspread for razor-sharp tuning of close-together stations. Outlet for earphones.

# HOW TO USE THE WORLD RADIO TELEVISION HANDBOOK

The World Radio TV Handbook is designed to help the international radio listener obtain maximum enjoyment from his receiver.

The first section of the Handbook contains instructive articles relating to broadcasting, information regarding broadcasting and television organizations, and popular technical articles and tables of practical value to listeners.

The main section of the book (pages 94-264) contains detailed information, by country, of the **Radio Stations** and broadcasting organizations of every country in the world, including names and addresses of broadcasting companies, names and titles of leading officials, lists of broadcasting stations in each country, including frequencies, wavelengths, transmitter power, call signs (if used), and station names. Program information is also listed, including times, frequencies, and beam areas of the broadcasts in each language. The announced **location** of the st., rel. st's exc., is usually the studio and administrative location, since the tr's are often located in outlying areas. - **Power** is stated in kilowatt (kW) or Watt (W). When two powers are listed, the figures represent the lower and upper limits of power, where a station uses more than one tr. on the frequency at different times (s.w.) or varies the power of the tr. for day and night operation (m.w).

A **listing by frequency and wavelength** of the shortwave stations of the world, and long and medium wave stations of Europe, North Africa, Near East is presented in the last part of the Handbook, for use in facilitating the identification of stations.

**Abbreviations:** See page 70 for explanation.

**Short-wave stations** may be used either for domestic broadcasting to listeners in the same country or for international broadcasting directed to listeners in other countries.

**International short-wave stations** usually employ directional antennas to beam their programs to particular areas on frequencies calculated for best reception. Most international broadcasts are scheduled for the evening hours in the intended reception area, but some are in the morning or at other times during the day. The reception areas give their names to the services: European Service (or to Europe), Far Eastern Service (or to Far East), North American Service (or to North America) etc. Languages employed are those of the listeners in the area to which the broadcast is directed, also the language of the transmitting country for reception by persons understanding that language.

Best reception is usually obtained from transmissions directed to your area. However, there is a considerable amount of overlapping between many service areas and, therefore, it is often possible to obtain good reception of programs beamed to adjacent areas, and sometimes, even of programs directed to distant parts of the world. Shortwave propagation conditions change continually because of the influence of daylight and darkness, seasonal effects and solar activity. Consequently, good reception requires frequency change from time to time.

(See articles: "Radio Broadcast Reception Conditions", "Solar Activity", on the respective pages).

**Domestic short-wave stations** are usually of lower power than international stations, and generally use non-directional or wide beam antennas, in order to reach local or national audiences. These stations make fewer seasonal frequency changes, and many operate on the same channel for both day and night operation. The stations are utilized to reach areas of a country where coverage by medium and long wave stations is not adequate.

The geographical Co-ordinates of the transmitter sites are given in degrees and minutes.

**Long and Medium wave stations** are used mainly for transmitting programs to listeners in the country in which the stations are located. These stations vary from powerful transmitters capable of being heard throughout the county to low power stations intended only for a small area in the vicinity of the transmitter.

**FM (Frequency Modulation) Stations** operate on very high frequencies (VHF); ranges of 88-108 MHz in the Americas and 87-100 MHz in other areas, and provide interference-free reception over a short radius. Most FM stations relay programs of a medium or long wave station.

**Frequency and Wavelength** — Frequencies are measured in kilohertz per second (kHz) and megahertz per second (MHz). One hertz (named after the German physicist Heinrich Hertz) signifies "one cycle per second" and accordingly, one kilohertz (kHz) equals one kilocycle per second (kc/s). Wavelengths are measured in meters.

A formula between frequency and wavelength is as follows:

$$\text{Wavelength (m)} = \frac{300000}{\text{Frequency (kHz)}}$$

$$\text{Frequency (kHz)} = \frac{300000}{\text{Wavelength (m)}}$$

(to page 16)

---

*(continued from page 12)*

Having been a DX-er since 1953 I know from experience that without the ready aid and guidance found in the WRTH, most listeners would **never** have had the opportunity to focalize their attention on the various subjects within international affairs, cultural life, music, geography, languages, etc, which are constantly available to the interested listener in the broadcasts from all parts of the globe.

The WORLD RADIO TV HANDBOOK is not only a classic, quick, clear and easy-to-use tool for everyone who wants to enjoy world listening, but also a very enlightening and sensible guide which, through concrete and practical suggestions and examples, takes its readers through easy stages in The WORLD RADIO TV HANDBOOK is thus not showing how to avoid the many pitfalls which beset the listener when trying to tune in and identify the stations.

The WORLD RADIO TV HANDBOOK is thus not only furnishing the listener with convenient and concise information, from which can be secured workable, usable and productive helps for immediate employment in the field of listening, but also securing that the international radio stations will have a steady-growing audience.

*Poul Ginnerup, Copenhagen, Denmark.*

Racal is a world leader in solid state HF communications receivers and systems. Name your requirement and Racal can meet it. Any facility which you require exists within the brilliantly designed modular equipments which Racal produces. The complete system of your choice with its adaptors, synthesizers and ancillaries assembled into a cabinet of the highest professional standard can be made available to you quickly. The Racal name in communications stems from the internationally famous RA.17 series of receivers. Its successor, the all solid state RA.217, forms the basic receiver for future Racal receiver systems. Like its predecessor, the RA.217 series has the same unequalled standard of receiver performance, a standard of performance chosen and preferred by major users in almost every country of the world.

**THE RACAL RA.1217 SOLID-STATE COMMUNICATIONS RECEIVER**
*(rack version of RA.217) 1 to 30 MHz, DSB, SSB, MCW, CW, fully transistorised high sensitivity stability and setting accuracy, facilities for external frequency control*

**Wherever communication is vital – choose Racal. You'll choose wisely.**

**RACAL**

***RACAL COMMUNICATIONS LIMITED,***
***Western Road, Bracknell, Berkshire, England.***

(continued from page 14)

Several broadcasting stations announce frequencies in kilocycles or megacycles. A kilocycle is 1000 cycles. A megacycle is 1000 kilocycles.

Due to the propagational conditions, interference by other stations, jamming, malfunction of transmitter, reallocation of frequencies by a country or convention, or for some other reason, stations may use frequencies which are at variance with the frequency(ies) indicated in this handbook.

**Beams:** The azimuth of maximum radiation of the transmitting antenna is given in degrees (clockwise) from True North, where such details are given by the respective stations.

**Program times** used in the listings are based on the 24 hour clock. Midnight is 00.00 hours, 3 a.m. is 03.00 hours, 9 a.m. is 09.00 hours, and midday is 12.00 hours. Then, instead of starting another 12 hour cycle (p.m.), under the 24 hour system the hours increase until midnight. Thus 3 p.m. is 15.00 hours, 10 p.m. is 22.00 hours, and so on until 23.59 (11.59 p.m.) is reached and a new 24-hour cycle starts. This system eliminates any confusion between times a.m. and p.m.

**Time Conversion:** All programs are listed in GMT (Greenwich Mean Time). To convert from GMT to your local time, refer to the World Time Table on page 76 to determine how many hours your time is ahead or behind GMT, and add or subtract that amount in order to convert to your clock time. For quick conversion, it is useful to write the GMT hours, 00 to 24, down on one side of a sheet of paper, and then enter the correct local time opposite each GMT hour. Summertime or Daylight Saving time, adds an hour to local time so this should be taken into account in countries where it is utilized.

**Program schedules:** The program schedules of many countries are divided into Home Services and Foreign Services. The Home Service programs are arranged by language and by program services or networks. The Foreign Service transmissions are generally arranged by beam area, and by language for each beam area. The times and frequencies of the programs in each language are listed together, in order to facilitate the determination of the times and frequencies of the broadcasts in each language.

Therefore, if you wish to hear a broadcast in a particular language from a country, refer to the listing for the country of the time and frequency of broadcasts in that language. Most broadcasts are transmitted on more than one frequency, so try the various frequencies listed, to determine which one is received best at your location.

**Identification of Stations:** Most stations in Europe, Middle East, Africa and Asia identify by announcing their station name and location. Most stations in North America and Pacific (incl. Australia/New Zealand) identify by the use of a call sign of 3 to 5 letters of a combination of letters and figures, of which the first, or first 2, denote the nationality in accordance with the international list of prefixes. Most stations in L. America use a call sign (sometimes not frequently announced), a station name, and location.

In addition, many stations use musical interval signals at sign on and between programs, in order to help listeners to find the station on their dial and identify it as the desired station. These interval signals are included in the country listings.

**How to identify a Station by Frequency or Wave length:** When you hear a station that is unknown to you, first try to determine some clue to its identity by attempting to determine the language, noting the type of program, etc. Then, note the approximate frequency or wavelength indicated on your dial, and turn to the table "Short-wave Stations of the World" in the back of the Handbook, and ascertain what stations operate in that vicinity. Next, check the program listings to determine which of the stations are scheduled to operate at that time of day, and which are most likely to be audible at your location, depending on the power and distance away. For definite confirmation, it is desirable to wait for station announcement or interval signal.

**Frequency Changes:** The frequencies listed are those which were scheduled for use at the time of publication. However, due to a number of reasons, including interference and changes in propagation conditions, it may be necessary for a country to make frequency changes. Often only one of the frequencies on a program will be changed, so the new frequency can be determined by tuning in the other frequencies and listening for the announcement of the frequencies being used. Reference to a publication listing the latest frequency changes for the Internation Stations: the **Summer-Edition to the WRTH** (published by mid-June each year).

**Interference:** Due to the present crowded condition of the medium and short wave broadcasting bands, interference may be encountered from other stations operating on the same or closely adjacent frequency. In addition to interference from other broadcast stations, there may also be interference from "Jammers", which transmit a variety of noises in an attempt to prevent certain foreign broadcasts from being heard in the country operating the jammers. When interference is encountered, try another of the listed or announced frequencies, if several are in use, or try a broadcast at another time.

**Reception from Hard-to-Hear Countries:** If you wish to hear a station or program from a particular country, refer to the listing from that country, determining first whether it has any broadcasts beamed towards your area or adjacent areas, if not, refer to the frequency, time and power listing to determine where and when reception might be possible. Also, note the bands and times when stations in other countries in that part of the world are audible. It is possible to hear many far distant stations, even if they do not beam programs to your area, by listening when the propagation and clearness of channel conditions are favorable.

**Verification by QSL-cards:** As indicated in the program listings for the various countries, many stations are interested in receiving reports from listeners about their transmissions. These stations acknowledge reports by sending listeners a QSL card (verification) or letter. Most **international** broadcasting stations do not require enclosure of return postage and will reply with a QSL card or letter. **Domestic** broadcasting stations do not normally request reports from foreign listeners, so return postage should be sent with reports to these stations. Return postage should be sent in the form of an International Reply Coupon (IRC), obtainable at post offices in most countries. Reports should be sent to the station address given in the country listings. They can be

*(continued from page 16)*
written in English in most cases, but Spanish is preferred by South and Central American stations.

Reception reports are useful to radio engineers in selecting the most suitable frequencies for broadcasts beamed to your area. Reports are preferred in the SINPO code, which is as follow:

| S (Signal Strenth) | I (Interference) | N (Noise) | P (Propagation Disturb. | O (Overall Merit) |
|---|---|---|---|---|
| 5 excellent | 5 nil | 5 nil | 5 nil | 5 excellent |
| 4 good | 4 slight | 4 slight | 4 slight | 4 good |
| 3 fair | 3 moderate | 3 moderate | 3 moderate | 3 fair |
| 2 poor | 2 severe | 2 severe | 2 severe | 2 poor |
| 1 barely aud. | 1 extreme | 1 extreme | 1 extreme | 1 unusable |

Information about **Television Stations** is provided in the section following the radio section, including names and address of Television companies, location, power and channel of Television stations, and program schedules of these stations.

With reference to the first Television page we give a short explanation of some of the technical words and figures mentioned—The announced **location** of the station is usually the studio location, since most TV tr's are situated upon the highest location in the area in order to obtain more widespread coverage—Two systems of **modulation** are used to transmit the audio signal of the TV st's either frequency modulation (FM) or amplitude modulation (AM). All video transmissions are normally amplitude modulated — **Polarization** signals are horizontally polarized (H) or are vertically polarized (V). Polarization is usually selected according to the need for a reduction of interference with other stations, or to obtain engineering standards required by the government of the country in which the st. is located — The **band width** is shown in MHz and represents the limits within which both the video and audio tr. are contained — **Number of lines** transmitted express the number necessary to form one complete frame or picture, and **frames** state the number of times per second the picture area is completely scanned — **Video and Audio Power** is indicated in kilowatt (kW) or Watt (W). In the most cases the figures denote the effective radiated power (ERP) due to the stations antenna system—**Video and Audio Frequency** is stated in MHz per sec. The relationship between the quoted figures and the limits of the video band varies among countries and can be determined by reference to the standards of the systems used by the respective countries.

# The new Ampex AG-20 leaves other portables standing

## Sound Studio at 12,000 feet

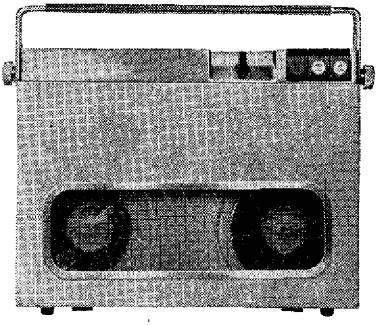
The Ampex AG-20 is the only *really* portable recorder that gives *really* professional quality.

It's at home recording sophisticated laboratory experiments, or recording the voices of sky divers falling at 124 m.p.h. Plug the AG-20 into a sound system and broadcast the tape . . . without editing. Applications are numberless.

This tiny package (only 12 lbs weight) has extreme durability, fantastic reproduction quality, unequalled ease of operation, fully adjustable heads, silicon transistors and tantalum capacitors throughout. And the world famous Ampex name on the front.

The AG-20 is all you've ever wanted in a professional portable recorder. And then some. (And it costs less.)

**Weight:** 12 lbs. **Size:** 12⅛" x 9¼" x 3¼".
**Tape speed combinations:** 3¾/7½ ips. 1⅞/3¾ ips. 7½/15 ips.
**Frequency response:** (at record level of — 10 db)
15 ips: 50 Hz to 16 k Hz (± 1.5 db).
7½ ips: 50 Hz to 12 k Hz (± 1.5 db).
3¾ ips: 50 Hz to 9 k Hz (± 2.0 db).
1⅞ ips: 50 Hz to 7 k Hz (± 3.0 db).
**Signal/Noise Ratio:** 15 ips & 7½ ips: Full track 60 db, Half track 55 db. 3¾ ips: 55 db, 50 db, 1⅞ ips: 50 db, 45 db.
**Flutter:** 15 ips and 7½ ips: better than 0.15%.
3¾ ips: better than 0.2%. 1⅞ ips: better than 0.4%.
**Speed Stability:** Better than ± 0.25%.



**AMPEX** **AG-20**

Ampex world headquarters is in Redwood City, California, and Ampex sales and service facilities are conveniently located in major cities throughout the world. For more information write to: Ampex Great Britain Ltd., Acre Road, Reading, Berkshire, England. Telephone: Reading 84411. Ampex S.A., Via Berna 2, Lugano, Switzerland. Telephone: 091/3.81.12. **Nature:** International Organization dealing with practical and theoretical questions connected with broadcasting and television prgr's and technique and cooperation between broadcasting and television organizations.
**Governing Body:** General Assembly consisting of one representative for each active member.
**Administrative Council:** Consisting of 7 to 13 members, Chairman for 1966-1967: Wlodzmierz Sokorski, President of the Polish Radio and Television Committee. Vice-Chairmen for 1966-1967: representatives - Presidents or General Directors of the U.A.R. Broadcasting Corporation, Cairo and of the National Broadcasting Organization "Voice of Vietnam", Hanoi.
**Members:** Representatives of the Radio and Television Organizations of the Chinese People's Rep., Rep. of Cuba, Czechoslovak S. Rep., Lithuanian SSR, People's Rep. of Poland, Rumanian Socialist Rep., United Arab Rep., Union of Soviet Socialist Rep., Democratic Rep. of Vietnam.
**Members:** Radio and Television Organizations of: People's Rep. of Albania; Belorussian SSR; People's Rep. of Bulgaria; Chinese People's Rep.; Rep. of Cuba; Czechoslovak S. Rep.; United Arab Rep; Estonian SSR; Finland; German Democratic Rep; Hungarian People's Rep; Iraq; Korean People's Democratic Rep; Latvian SSR; Lithuanian SSR; Rep. of Mali; Moldavian SSR; People's Rep. of Mongolia; People's Rep. of Poland; Rumanian Socialist Rep; Ukrainian SSR; Union of Soviet Socialist Rep; People's Democratic Rep. of Vietnam.
**Facilities:** Administrative Office and technical Centre, Prague, Czechoslovakia.
**Specialized Commissions:** Technical Commission: Chairman: Z. Zherkov (Bulgarian People's Rep.). Radio Prgr. Commission: Chairman: R. Grimmer, First Vice-President of the Radio & Television Organization of the German Democratic Rep; Television Prgr. Commission and Intervision Council: Chairman F. Kulcsár, Hungarian Radio and Television.
**Publications:** Review of the International Radio and Television Organization (OIRT) "Radio and Television" in English - French, Russian and German, issued every two months. Monthly OIRT Information, and quarterly Catalogues radio prgr's suitable for exchange.
**Meetings:** General Assembly every two years. Administrative Council every year.
**Relations** with all important organizations active in the field of radio and television.

## INTERNATIONAL TELECOMMUNICATION UNION

**Addr:** Place des Nations, 1211 Geneva 20, Switzerland. **Te:** 237000 - 348000.
**Secretary General** ad interim: Mr. Mohamed Mili.
**Inter. Frequency Registration Board (IFRB)**
**Chairman:** Mr. Fioravanti Dellamula. **Vice-Chairman:** Mr. Abderrazak Berrada.
**Intern. Tel. & Tel. Consultative Committee (CCITT).**
Dir: J. Rouvière, France.
**Intern. Radio Consultative Committee (CCIR).** Director: Mr. Jack W. Herbstreit
Study Group X (broadcasting). Chairman: A. P. Walker, USA; Study Group XI (television), Chairman: E. Esping, Sweden; Study Group XII (Tropical Broadc.), Chairman: Chaman Lal, India.
**Administrative Council:** Algeria, Argentina, Australia, Brazil, Canada, China, Dehomey, Ethiopia, Federal Rep. of Germany, France, India, Ireland, Italy, Japan, Lebanon, Malagasy Rep., Mexico, Morocco, Nigeria, Pakistan, Poland, Saudi Arabia, Switzerland, Uganda, United Kingdom, United States of America, USSR, Venezuela, Yugoslavia.
**Membership** (132 members as at 1st August, 1967): Afghanistan, Albania (People's Rep. of), Algeria (Dem. and Popular Rep. of), Saudi Arabia (Kingdom of), Argentine Rep, Australia (Commonwealth of), Austria, Belgium, Bielorussian SSR, Burma (Union of), Bolivia, Brazil, Bulgaria (People's Rep. of), Burundi (Kingdom of), Cambodia (Kingdom of), Cameroon (Federal Rep. of), Canada, Central African Rep, Ceylon, Chile, China, Cyprus (Rep of), Vatican City State, Colombia (Rep. of), Congo (Dem. Rep. of the), Congo (Rep. of the) (Brazzaville), Korea (Rep of), Costa Rica, Ivory Coast (Rep. of the), Cuba, Dahomey (Rep. of), Denmark, Dominican Rep, El Salvador (Rep. of), Terr's represented by the French Overseas Post and Telecomm. Agency, Ecuador, Spain, USA, Ethiopia, Finland, France, Gabon Rep, Ghana, Greece, Guatemala, Guinea (Rep. of), Guyana, Haiti (Rep. of), Upper Volta (Rep. of), Honduras (Rep. of), Hungarian People's Rep, India (Rep. of), Indonesia Rep. of), Iran, Iraq (Rep. of), Ireland, Iceland, Israel (State of), Italy, Jamaica, Japan, Jordan (Hashemite Kingdom of), Kenya, Kuwait (State of), Laos (Kingdom of), Lebanon, Lesotho (Kingdom of), Liberia (Rep. of), Libya (Kingdom of), Liechtenstein (Principality of), Luxembourg, Malaysia, Malawi, Maldive Islands, Malagasy Rep, Mali (Rep. of), Malta, Morocco (Kingdom of), Mauritania (Islamic Rep. of), Mexico, Monaco, Mongolian People's Rep, Nepal, Nicaragua, Niger (Rep. of the), Nigeria (Federal Rep. of), Norway, New Zealand, Uganda, Pakistan, Panama, Paraguay, Netherlands (Kingdom of the), Peru, Philippines (Rep. of the), Poland (People's Rep. of), Portugal Spanish Provinces in Africa, Portuguese Overseas Provinces, Syrian Arab Rep, United Arab Rep, Federal Rep. of Germany, Federal Socialist Rep. of Yugoslavia, Ukrainian SSR, Somali Rep, Rhodesia, Roumania (Socialist Rep. of), United Kingdom of Great Britain and Northern Ireland, Rwanda (Rep. of), Senegal (Rep. of the), Sierra Leone, Singapore, Sudan (Rep. of the), South Africa (Rep. of), and Territory of South-West Africa, Sweden, Switzerland (Confederation), Tanzania (United Rep. of), Chad (Rep. of the), Czechoslovak Socialist Rep, Territories of the USA, Overseas Terr. for the International relations of which the Gov. of the UK are responsible, Thailand, Togolese Rep, Trinidad and Tobago, Tunisia, Turkey, Union of Soviet Socialist Rep, Uruguay (Oriental Rep. of), Venezuela (Rep. of), Vietnam (Rep. of), Yemen, Zambia (Rep. of).

## UNESCO

(United Nations Educational, Scientific and Cultural Organisation)
**Addr:** Place de Fontenoy, Paris 7, France.
**L.P:** Dir. Gen: René Maheu. Asst. Dir. Gen. for Communication: Tor Gjesdal.
OFFICE OF PUBLIC INFORMATION:
**Radio and Visual Information Division:** Chief: H. R. van Stuwe. Deputy Chief: Gerald S. Wade — Regional Units: Anatoli Bolgarev (Russian language production), Jean Calvel (French language production), Rex Keating (English language production), Fernando Restrepo (Spanish language production). ## UNION OF NATIONAL RADIO AND TELEVISION ORGANISATIONS OF AFRICA (URTNA)

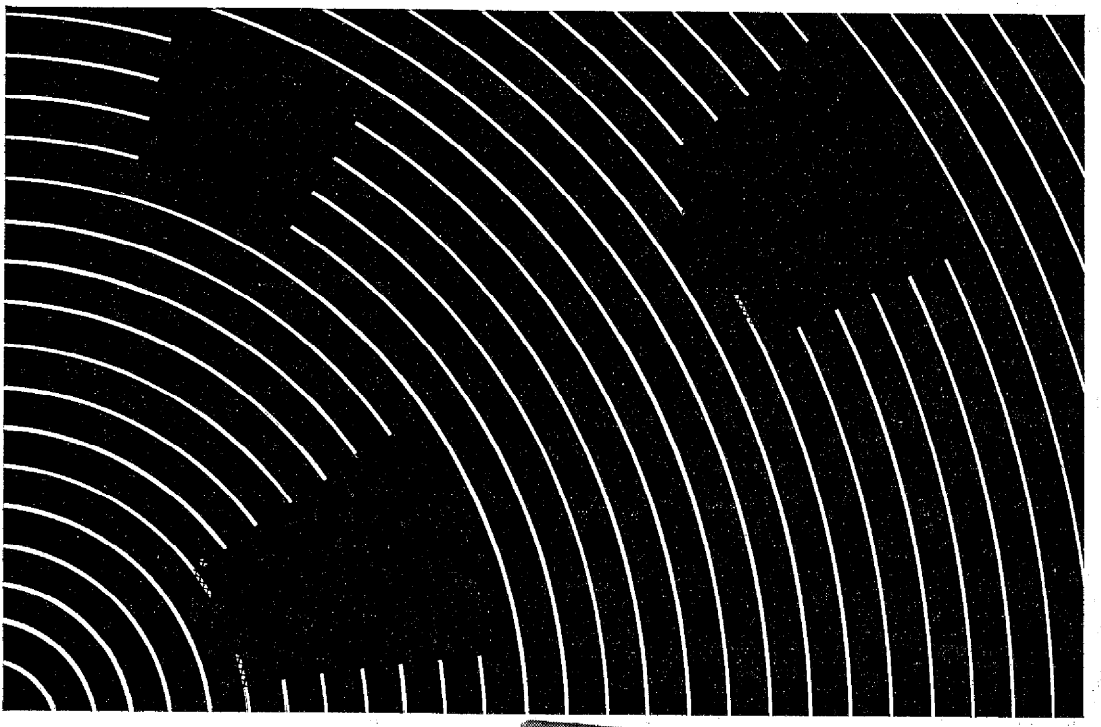
URTNA is a Union of National Broadcasting Organisations of all independent Africa, its aims, under Article 2 of its statutes are: -

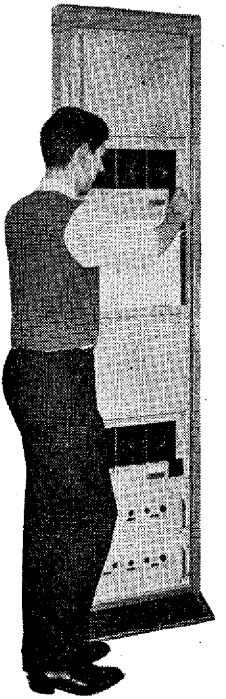
*(continued page 22)*



# Filling in the shadows

To increase the coverages of VHF television stations and to fill in the 'shadows' in main station coverage caused by uneven features in terrain, STC has produced the FTU.5-A low power television translator for combined translation and amplification of vision and sound channels. Orders have been placed on STC by the ITA for VHF translators, and by the BBC for bands IV and V translators.

The reliability of the FTU.5-A is such that stations can run entirely unattended for long periods. The use of solid-state techniques virtually eliminates the risk of failure and consequent shut-down, and the need for skilled maintenance is reduced to a minimum.



□ Suitable for European monochrome systems □ Designed for unattended operation □ Common circuits for sound and vision □ Extensive use of solid-state techniques.

Standard Telephones and Cables Limited, Radio Division, Oakleigh Road, New Southgate, London N.11, England. Telephone: 01-440 3451. Telex: 261912.

world-wide telecommunications and electronics

*(continued from page 20)*

"The U.R.T.N.A. has no commercial aims. Its objects are: -

(a) To support in every field the interests of those African organisations operating radio and or television services that have accepted the present statutes and to establish relations with other international organisations.

(b) to promote and coordinate the study of all questions relating to broadcasting and to secure the exchange of information on all matters of general interest to those radio and or television services.

(c) to take all possible steps designed to assist the development of African radio and television in all its forms. to seek within the framework of African co-operation, the solution to any differences that may arise between members.

(e) to use its good offices to ensure respect by all members for the provision of international and inter-African agreements relating to all aspects of radio and television".

The Union headquarters is at the moment in Dakar and its Technical Centre at Bamako - The Pres. of the Union is Mr. M. Rezzoug, Algeria; Vice-Pres. Mr. Racine Kane, Mali. The Director of the Administrative Centre at the Headquarters is Mr. A. H. Younes. The Director of the Technical Centre is A. H. Antar. Members of the Administrative Council of the Union are Algeria, Cameroon, Congo-Brazzaville, Ivory Coast, Mali, Mauritania, Nigeria, Senegal and Togo. - The Headquarters address of the Union is U.R.T.N.A., 15, Boulevard de la Republique, B.P. 3237, Dakar, Senegal - Secr. Gen: A. Taher.

## ASIAN BROADCASTING UNION

Headquarters: ABU Secretariat, c/o NHK, Uchisaiwai-cho, Chiyoda-ku, Tokyo, Japan. Cable address: ABUNI, Tokyo.
**Sec. Gen.'s Office:** Box 3636, G.P.O., Sydney, Australia. Cable address: ASBUN, Sydney.

**President:** Yoshinori Maeda, President, Nippon Hoso Kyokai, Japan.

**Administrative Council:** Australian Broadcasting Commission, Broadcasting Corporation of China, All India Radio, Nippon Hoso Kyokai, Radio and TV Malaysia, New Zealand Broadcasting Corporation, Philippine Broadcasting Service, Radio Thailand, Turkish Radio and TV Corporation.

**Secretary-General:** Sir Charles Moses, C.B.E.

**Full Members:** Radio Afghanistan, Australian Broadcasting Commission, Radio Ceylon, Broadcasting Corporation of China, All India Radio, Nippon Hoso Kyokai, Korean Broadcasting System, Radiodiffusion Nationale Lao, Radio and TV Malasia, Radio Nepal, New Zealand Broadcasting Corporation, Radio Pakistan, Philippine Broadcasting Service, Radio and TV Singapore, Radio Thailand, Tonga Broadcasting Commission, Turkish Radio and TV Corporation, UAR Broadcasting Corporation, Radio Viet-Nam, Samoa Broadcasting Service.

**Associate Members:** Federation of Australian Commercial Broadcasters, Brunei Broadcasting Service, Canadian Broadcasting Corporation, Fiji Broadcasting Commission, Office de Radiodiffusion Television Française, Arbeisgemeinschaft der Öffentlich-Rechtlichen Rundfunkanstalten der Bundesrepublik Deutschland, Zweites Deutsches Fernsehen, Radio Hong Kong. Hong Kong Commercial Broadcasting Co. Ltd., Nigerian Broadcasting Corporation, British Broadcasting Corporation, Independent Television Authority/Independent Television Companies Association Ltd. (U.K.), Columbia Broadcasting System (U.S.A.), National Broadcasting Company (U.S.A.), National Educational Television (U.S.A.), U.S. Information Agency, U.S.A., Time-Life Broadcast Inc. (U.S.A.)

The ABU is a Union of national broadcasting organizations in the Asian/Pacific region which was formally established on 1st July, 1964, following five Asian Broadcasters' Conferences held between 1957 and 1963 in Tokyo, Kuala Lumpur and Seoul. The first annual General Assembly of the ABU was held in Sydney in November, 1964, and the second, attended by delegations from 25 members, in Tokyo in October, 1965. The third Assembly in Taipei 24-31 October 1966. The fourth General Assembly was held in Singapore 23-30 October 1967.

**Publications:** ABU Newsletter (Monthly in English).

## INTERNATIONAL BROADCASTERS SOCIETY (IBS)

**Secretariat:** 78 Zwaluwlaan, Bussum, the Netherlands. (Tel: 02159-10005).

**Office for USA:** 380 Lexington Avenue, Suite 303, New York City, N.Y., U.S.A. 10017. Telephone: 212 - MU 2-4500).

**Nature:** The IBS is a world body. It is a non-profit professional fellowship created to serve the needs of all persons and organizations everywhere concerned in any way with radio and television broadcasting.

The IBS function as a permanent forum for maintaining liaison. It interprets the meaning of the word liaison in the broadest possible manner.

**There are three main types of membership.** (i) Corporate, (ii) Personal and (iii) Free Exchange. **Corporate** membership is open to every radio and television station in the world as well as related industries. **Personal** membership is open to anyone in anyway concerned with radio and or television broadcasting. **Free Exchange Membership** is offered to every association and federation in the world, in any way concerned with serving broadcasting interests.

**Governing Body:** The IBS is governed by a Board of Directors elected by the membership. There are sixteen seats on the Board. Names of the current Board will be found in the 1966 WRTH.

**Relations:** The Society has registered members from more than a hundred nations, including an exchange of memberships with a number of national and international associations.

**Status:** The Society is registered with l'Union des Associations Internationales, in Brussels, as a non-governmental and non-legislative organization. The Society is a legal corporate body under the laws of the Netherlands.

## COMMONWEALTH BROADCASTING CONFERENCE

**Members:** All India Radio, Australian Broadcasting Commission, British Broadcasting Corporation, Canadian Broadcasting Corporation, Caribbean Broadcasting Corporation, Ceylon Broadcasting Corporation, Cyprus Broadcasting Corporation, Ghana Broadcasting Corporation, Jamaica Broadcasting Corporation, Malawi Broadcasting Corporation, Malta Broadcasting Authority, New Zealand Broadcasting Corporation, Nigerian Broadcasting Corporation, Radio & Television Malaysia, Radio Pakistan, Radio & Television Singapura, Radio Tanzania, Radio Uganda, Sierra Leone Broadcasting Service, Voice of Kenya, Zambia Broadcasting Services.
Established in 1945, the Conference is a standing association of the national public service broadcasting organizations which are responsible for the planning and presentation of the broadcast programmes of independent Commonwealth countries. Holding in common the belief that broadcasting is a public trust, the member organizations are professionally committed to the establishment and extension of national radio and television services as a means of information, education and entertainment. The principal purpose of the Conference is the professional improvement, through collective study and mutual assistance, of the broadcasting programmes of the member organizations, and of the technical facilities for their transmission and reception. The intensified and sustained training of professional broadcasting staff, in the fields both of programming and engineering, in support of these ends, is a continuing practical concern of the Conference which, at its Sixth Meeting (Nigeria, 1965), established a permanent Study Group on Training to further this work.

The Seventh Conference, which will meet in New Zealand from 20th February to 6th March 1968, will make a particular study of the educational responsibilities of national broadcasting.

**Secretariat address:** Broadcasting House, London, W.1, England.

## ASOCIACION INTERAMERICANA DE RADIODIFUSION (AIR)

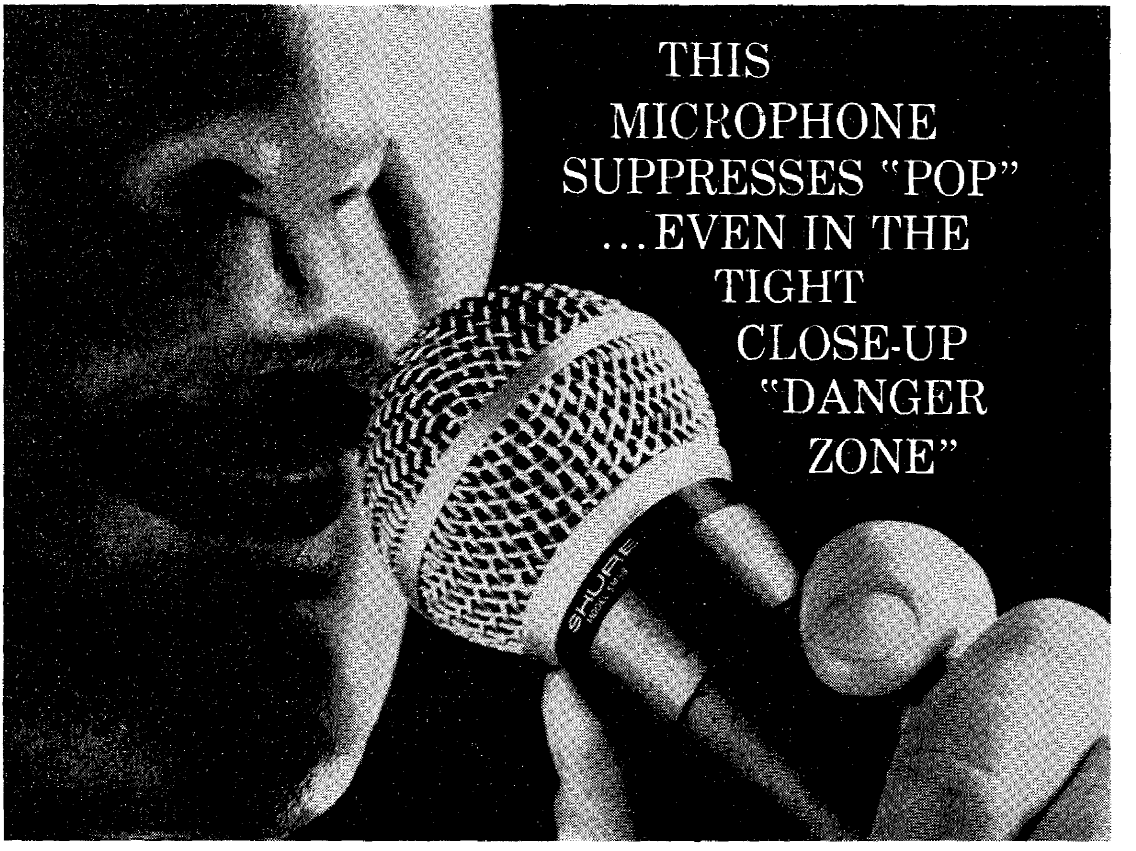
President: Sr. Lic. Félix Cardona Moreno, Apartado 3955, Caracas, Venezuela.

AIR is an association of the broadcasting corporations of the American countries. Founded in 1946 it represents more than 5000 broadcasting and 400 television stations.

## UNIVERITE RADIOPHONIQUE ET TELEVISUELLE INTERNATIONALE (U.R.I.)

**Addr:** 116, Ave. du Pres. Kennedy, Paris 16è, France - **L.P:** Pres. M. R. Dovaz. Secr. Gen: A. Lanoux - Radio Commission: Dr. H. Wicht (Germany); A. Diack (Sénégal); J. Kleibl (Czechoslovakia) - TV Commission: E. Haas (Switzerland); P. Bokor (Hungary); P. Gonelli (Italy).

**TABLE OF SHORTWAVE STATIONS to the Summer-Supplement 1968**
In order to make this as complete and up-to-date as possible we direct an earnest appeal to **all radio stations using shortwave** to send us regularly their transmission- and/or programme-schedules.



The Shure SM58 self-windscreened unidirectional microphone is ideal for broadcast uses as remote news, sports, interview and vocal recordings because it eliminates or minimizes the irritating "pop" caused by explosive breath sounds. It's great for studio announcing, too—or wherever the announcer or vocalist "hugs" the microphone. Of course, the same filters that eliminate pop also do away with the necessity for an add-on windscreen for outdoor uses.

On the other hand, the unusually effective unidirectional cardioid pickup pattern (uniform at *all* frequencies, in *all* planes) means that it is a real problem-solver where background noise is high or where the microphone must be operated at some distance from the performer. Incidentally, but very important, the SM58 tends to control the low frequency "boominess" that is usually accented by close-up microphones.

Other features: the complete pop-proof filter assembly is instantly replaceable in the field, without tools. Filters can be easily cleaned, too. Stand or hand operation. Detachable cable. Rubber-mounted cartridge minimizes handling noise.

Special TV tested non-glare finish. Multi-impedance, small size for maximum handability.

# EUROVISION IN 1967

*By J. Treeby Dickinson*
*Chief Engineer, Technical Centre of the E.B.U.*

Eurovision in 1967 will be memorable for the most extensive and elaborate programme that has yet been shown on the screens of the world's television receivers. This was "Our World", the first programme to be originated and broadcast simultaneously in five continents. Work on this two-hour transmission started in April, 1966, when the initial proposal prepared by Aubrey Singer of the B.B.C. was discussed by the E.B.U. Television Programme Committee. The idea of using all the available telecommunication satellites to link as many television services as possible in a programme illustrating the different aspects of life around the world, required the active co-operation of twenty-four television services, as well as of numerous telecommunication authorities and the organisations exploiting communication satellites.

Altogether 500 million viewers are estimated to have seen "Our World" — a greater number even than that for the Final of the World Cup Football Championships in 1966.

Although the technical problems posed by this programme were in their nature similar to those already tackled for earlier large-scale Eurovision productions, the combination of rapid switching between widely-separated sources and the multiplicity of transmission standards implied that the circuit-planning arrangements were the most complicated yet undertaken. Four satellites were used, two over the Atlantic Ocean, one — the main circuit — between the Earth-stations at Andover (United States) and Goonhilly Downs (United Kingdom) and the other — the reserve circuit — between the Earth-stations at Mill Village (Canada) and Pleumeur Bodou (France); the Pacific Ocean was bridged between the Earth-stations at Juo (Japan) and Brewster Flat (United States), which provided a three-way link between Rosman (United States), Toowoomba (Australia) and Kashima (Japan). As is well known, the efforts to associate the members of Intervision with this programme failed, as the television services of the Eastern European countries withdrew a few days before the transmission, necessitating considerable modifications to the plans at short notice.

Standards converters were deployed so that all contributions were distributed without double-conversion to areas using the originating transmission standards, the contributions from Australia, however, being originated on 525 lines to simplify the problem. It was necessary to provide audio-delay facilities at the arrival ends of the transatlantic and transpacific telephone cables to keep the reserve programme-sound synchronous with the picture being relayed by the satellite, which was following a much longer path. In addition to the programme-sound networks, six communication networks were provided for co-ordinating the transmission and distributing the guide commentaries.

The other main innovation during 1967 was the introduction of Eurovision colour transmissions. Several experimental exchanges and loop-tests were arranged during the early part of the year to enable Members of the E.B.U. to verify the performance obtained over the circuits between France, Germany and the United Kingdom. The first programme distributed over the Eurovision network for broadcasting in colour by E.B.U. Members was the "International Star Parade" from West Berlin on 26th August, 1967, the day after the inauguration of colour-television broadcasting in Germany. It was broadcast in colour in the United Kingdom, Denmark and Sweden, the colour information being removed before transmission in Austria, Belgium, the Netherlands, Portugal, Spain and Switzerland, where is was broadcast in monochrome. Colour reception was reported as being of high quality at all points where the colour signal was broadcast.

The number of programme exchanges in colour was limited at the beginning by the small number of organisations that had started colour-television services. By the beginning of 1968, however, regular colour broadcasting will have begun in France, Germany, the Netherlands and the United Kingdom, thus providing a wider range of both sources and destinations for colour programmes. The problem

*(continued from page 26)*

of transcoding between the SECAM system used in France and the PAL system used in the other three countries mentioned above has been one of the handicaps which has complicated the work of Eurovision. It has been agreed, therefore, that, as a matter of principle, colour signals will be distributed over the Eurovision Network in the system in which they are originated and that organisations requiring a different colour or monochrome signal for their own purposes will effect the necessary transcoding locally. Exchanges with the countries using the 525-line NTSC-colour system, such as the E.B.U. Associate Members in the United States, Canada, Mexico and Japan are also possible through the use of the electronic field-store colour converter developed by the B.B.C., first used on 10th September, 1967, to relay the 'World Series' Golf Championships from Akron, Ohio in the United States to viewers in the United Kingdom. This converter is used also when the B.B.C. broadcasts tape-recordings in colour obtained from the United States and other 525-line sources.

The regular exchange of monochrome programmes has continued to develop, with a total of 1845 transmissions in 1966 planned and directed by the E.B.U. Technical Centre, Brussels, having a total duration of 1146 hours — representing increases over 1965 of 19 per cent. and 18 per cent., respectively. Figures for the first half of 1967 are 1001 transmissions and 555 hours, indicating that the rise is not quite so rapid this year. The programme category showing the greatest rate of growth was again the Daily News Exchange, which was particularly busy at the time of the Middle East crisis in the Spring of 1967. An interesting trend is the increase in the average number of organisations receiving each programme. Among the entertainment programmes with the biggest audiences broadcast by E.B.U. Members were those organised by the E.B.U. Television Programme Committee, such as the Eurovision Song Contest which was won in 1967 by the United Kingdom entry; the 1968 Contest will be originated and distributed in colour.

Almost all E.B.U. Active Members having television services can now take part in Eurovision exchanges; only Iceland, cut off by the sea, and the Members in the Eastern Mediterranean are still "isolated". Investigations into the possibilities of using a satellite system, to replace the international junctions of the terrestrial network are continuing, but, in view of extremely far-reaching technical and financial problems of both the satellite and the many Earth-stations that would be needed, this is still far from being put into effect. One of the advantages of a satellite system would be the possibility of immediately extending the Eurovision facilities to countries for which the installation of a terrestrial link would be very difficult or even impossible. The near future, however, will require a more intensive use of the existing facilities, for example, a second Daily News Exchange will be introduced from 1st January, 1968, and in this context the lease of a nucleus of terrestrial international vision circuits, to cover the period until a satellite system could be utilised, is being investigated. The Permanent Sound Network continues to be heavily used, and the conference network has been extended to Madrid.

The plans of the E.B.U. Operation Group are already well advanced for the distribution in Europe of the television coverage — probably in colour — of the 1968 Olympic Games in Mexico.

GENERALVERTRETUNG DER SIEMENS AG. FÜR ÖSTERREICH IM BEREICH SCHWACHSTROMTECHNIK

# INTER-CONTINENTAL TELEVISION PROGRESS 1967-FUTURE 1968

*By Edgar T. Martin, Engineering Manager and George Jacobs, Chief Frequency Division Voice of American, U.S. Information Agency, Washington, D.C. 20547.*

What was perhaps the most exciting intercontinental television event of 1967 took place on June 25, which was designated as "World Television Day" To mark this event, broadcasting organisations on four continents joined forces for an imposing technological feat that enabled millions of viewers in more than 22 countries to see simultaneously a special two-hour television program aptly titled "Our World". The program was live in its entirety, without the insertion of tape or film prepared in advance.

Four communication satellites, two over the Atlantic and two over the Pacific, provided an unprecedented link-up between the widely separated points on the globe participating in the program. Portions of the "Our World" program originating in Japan and Australia were relayed to the state of Washington in the USA through an INTELSAT satellite and the NASA ATS-I satellite, both in stationary orbits over the Pacific Ocean. From Washington the programs were transmitted by microwave to a central control point in New York City.

A master control center in the London headquarters of BBC television and a sub-control center in New York City were responsible for weaving the various sequences into the final product. Program sequences originated in Japan, Australia, Canada, Mexico and the United States were directed to the New York control point, from where they were flashed to London via two INTELSAT satellites in stationary orbit over the Atlantic. Also fed into London, over the Eurovision network, were sequences originating in European cities. From London, the finished product was directed along these same land network and through the four satellites to each participating country — live and instantaneously!

At London, sound tracks in English, French and German were added to the video sequences. Other languages, as required, were added as the program was received at participating countries.

The "Our World" program opened with glimpses of babies newly born in Japan, Denmark, Mexico City and Canada. It went on to review efforts to increase the world's food supply with live shots from farms in the USA, Australia and Japan. It showed how housing problems are being solved in Canada, New York and Scotland. There were examples of sporting events and adventure from Canada, France, New York and Italy.

Perhaps one of the most rewarding sequences of the "Our World" program was the sampling of the arts — a rehearsal of "Lohengrin" from the Bayreuth Festival, Franco Zeffirelli rehearsing a scene during the filming in Italy of "Romeo and Juliet", Leonard Bernstein and Van Cliburn rehearsing at the Lincoln Center in New York and Joan Miro and Marc Chagall at work in their studios in France.

The program spanned the zones of time. Simultaneously viewers saw glimpses of European cities on a Sunday evening; a Sunday afternoon crowd of well wishers massed outside the Victorian mansion in Glassboro, New Jersey, where President Johnson and Premier Kosygin were discussing world problems; flower-bedeckled Vancouver awakening on a Sunday morning; and Australians going about their business on a Monday afternoon!

The linking of Australia to North America and Europe was perhaps the most vivid accomplishment. Despite the huge geographical separation the images from Down Under were of studio quality and viewers were treated to an interesting discussion of man's conquest of space given live from the Parkes Radio Telescope Observatory by a leading Australian scientist.

*(continued page 34)*

GEORGE JACOBS

George Jacobs was born on July 16, 1924, in New York City. He received his B.E.E. degree from Pratt Institute, Brooklyn, N.Y. and his M.S.E.E. degree from the University of Maryland in 1960.

Mr. Jacobs is a representative of the Interdepartment Radio Advisory Committee (IRAC) and several other policy-level U.S. Government committees in the field of telecommunications. He has served as a delegate to several international broadcasting and telecommunication conferences, including the 1959 ITU Administrative Radio Conference, where he was the U.S. spokesman for high frequency broadcasting.

Most recently he attended the ITU's International Space Communication Conference and the Eleventh Plenary Assembly of the International Radio Consultative Committee (CCIR). Mr. Jacobs was the U.S. Delegation's spokesman for satellite broadcasting at both conferences.

Mr. Jacobs is a Senior Member of the IEEE, a member of URSI, and a registered Professional Engineer in the District of Columbia.

EDGAR T. MARTIN

Edgar T. Martin was born on May 1, 1918, in Princetown, West Virginia. He received his B.S.E.E. in 1938 and his M.S.E.E. in 1953, both from Virginia Polytechnic Institute. He also holds an M.A. in Government from American University, conferred in 1957 and an LL.B. from George Washington University. In 1959, he earned his LL.M. from Georgetown University.

He is a registered Professional Engineer in Virginia and the District of Columbia, and he is also a member of the Virginia Bar. He has attended more than a dozen major international conferences dealing with broadcasting and telecommunications, and was a delegate to the ITU's Administrative Radio Conference held in Geneva.

*(continued from page 32)*

The "Our World" program was the realization of a suggestion first made by Mr. Aubrey Singer of the BBC. At the successful conclusion of the program Mr. Singer described aptly its importance in the following words: "We have realized through the miracle of television that it is now possible to help each person around the world to know his neighbor a little better, and to understand in the long run that we are all brothers".

Another "Our World" program is planned for 1968 but its date has not yet been announced. It is hoped that the 1968 program will be extended to an additional number of countries through the use of the MOLNIA satellites and the Intervision Network of Eastern Europe.

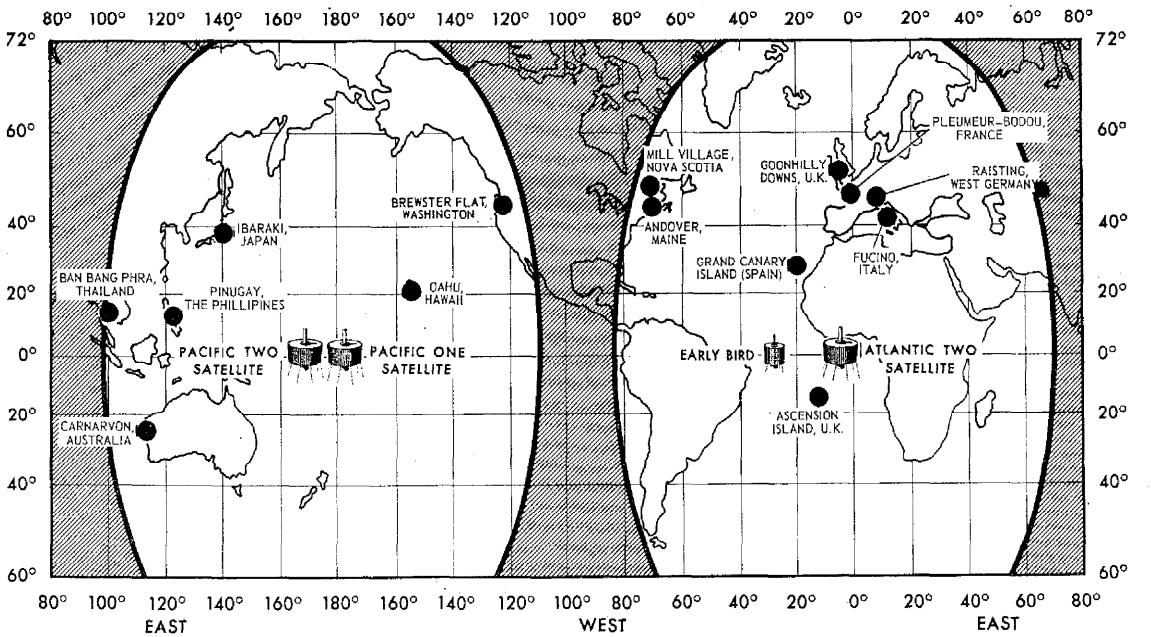
In addition to the "Our World" program, INTELSAT satellites were used for the intercontinental relay of 325 individual television programs during 1967, for a total of 210 hours. Highlighting these programs were the visit of Pope Paul to Fatima; the Johnson-Kosygin meetings at Glassboro; the Middle East debate at the UN; the Konrad Adenauer funeral; the visit of President Saragat of Italy to the White House and to EXPO-67; the Indianapolis Speedway auto race; and in color, the U.S. Open Golf Tournament.

The International Telecommunication Consortium (INTELSAT), the world partnership to build, own and operate a single global commercial communication satellite system at the earliest practical date, continued to grow during 1967. The number of countries participating in INTELSAT grew from 53 at the close of 1966 to 58 by the end of 1967. The following countries are presently participants in the INTELSAT effort and several others are expected to join during 1968: Algeria, Argentina, Australia, Austria, Belgium, Brazil, Canada, Ceylon, Chile, China (Rep.), Colombia, Denmark, Ethiopia, France, Germany (Fed. Rep.), Greece, India, Indonesia, Iraq, Ireland, Israel, Italy, Japan, Jordan, Korea, Kuwait, Lichtenstein, Libya, Lebanon, Malaysia, Mexico, Morocco, Monaco, the Netherlands, New Zealand, Nigeria, Norway, Pakistan, Peru, Philippines, Portugal, Saudi Arabia, Singapore, South Africa, Spain, Sudan, Sweden, Switzerland, Syria, Tanzania, Thailand, Tunisia, United Arab Republic, United Kingdom, United States of America, Vatican City, Venezuela and Yemen.

Satellites in the INTELSAT system are paid for and owned on a proportional basis by each member of the Consortium. The Communication Satellite Corporation (COMSAT) represents the USA on INTELSAT and acts as manager on behalf of the 58-nation Consortium. By the end of 1967 four INTELSAT satellites were in commercial operation, two over the Atlantic and two over the Pacific Ocean. A fifth INTELSAT satellite, launched over the Pacific, is not commercially operational because of a faulty orbit.

Planning for the expansion of its globe-girdling commercial communication satellite system, INTELSAT has under construction four huge satellites each containing 1200 telephone channels and capable of simultaneous transmission of at least two television

## OPERATIONAL COMMUNICATIONS SATELLITE EARTH STATIONS AND SATELLITE COMMUNICATIONS COVERAGE AREAS



Two INTELSAT satellites over the Atlantic Ocean and another two over the Pacific made commercial satellite communications available to more than two-thirds of the world during 1967. New and more powerful satellites to be launched in 1968 will make global coverage a reality.

relays. It is planned to orbit two of these satellites over the Atlantic Ocean, one over the Pacific and the other over the Indian Ocean during 1968.

By the end of 1967 there were a total of 14 permanent earth stations in operation in the INTELSAT system in the following countries: three in the United States, two in Spain, two in Italy, two in the United Kingdom, and one each in Canada, Australia, Japan, France and Germany. There were also temporary stations in operation in the Philippines and Thailand. During 1968 three new earth stations are planned for the United States, and one each for Canada, Japan, Panama, Brazil, Chile, Ecuador, Mexico, Venezuela, Bahrain, Hong Kong, Indonesia, Philippines and Thailand.

By the end of 1968 President Kennedy's dream of a global commercial communication satellite system in which the entire world would participate and from which all mankind would benefit should be very close to realization.

Another significant step in the development of intercontinental television took place during 1967 with the launching by the Soviet Union of another MOLNIA communication satellite. This was the fifth satellite launched in the MOLNIA series of which at least three are reported to be in operation. It has also been reported that during 1967 the Soviet Union had completed a domestic satellite television network using the MOLNIA satellites and 20 miniature earth relay stations (called orbit stations) to link its vast eastern provinces with Moscow. The system is primarily intended to bring Moscow telecasts to residents in Siberia and the Soviet Far East over distances up to 6000 miles according to Soviet announcements. Moscow television broadcasts are beamed to the MOLNIA satellites which relay them to the orbit mini-stations from where they are distributed through conventional television facilities to the viewer.

While the development of a direct broadcasting satellite is under active study by the world's experts there are a number of complex problems remaining to be solved before it can become a reality. The problems of using satellites for broadcasting radio and television programs directly to home receivers will be given serious consideration at an interim meeting of the International Radio Consultative Committee (CCIR) scheduled to be held in Madrid during the spring of 1968.

During 1967 INTELSAT satellites forged a television link which spanned four continents. During 1968 the link is expected to be strengthened with its expansion to a large number of additional countries. During 1968, more people in more parts of the world will, to repeat the words of Mr. Aubrey Singer, get to know his neighbor a little better and to understand, in the long run, that we are all brothers.

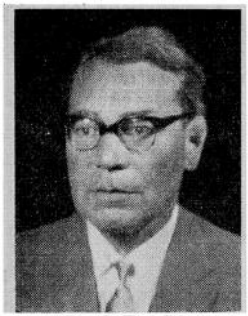
# SOLAR ACTIVITY IN 1968

*by Prof. Dr. M. Waldmeier, Zurich*



Prof. Dr. M. Waldmeier

While in 1966 solar activity was still at a low level, it became wholly developed in 1967. The most steep increase in sunspot-numbers occurred at the beginning of the year, when the monthly mean of the observed sunspot-numbers jumped from 70 in December 1966 to 108 in January 1967. It remained high for the first quarter and dropped strongly in the second according to the following monthly sunspot-relative-numbers:

| Jan. | Feb. | Mar. | Apr. | May | June | July | Aug. |
|---|---|---|---|---|---|---|---|
| 108 | 92 | 108 | 65 | 82 | 63 | 88 | 99 |

After the deep secondary minimum in June solar activity resumed its ascend that will lead to the maximum in 1968. Strong month-to-month fluctuations as in the first half of 1967 are not unusual. As the mechanism of the spot formation is but badly understood, short-term variations in the solar activity are not predictable. By smoothing out these fluctuations one gets a simple curve with a more or less uniform ascend before and a regular descend after the maximum. It is only the general run of these smoothed curves that can be predicted with fair reliability. Even the curves of the smoothed sunspot-numbers show strong variations from one cycle to the next. The smoothed sunspot-number at solar maximum may be as low as 50 and as high as 200; its mean value is around 100. Therefore sunspot predictions are not trivial at all, but have to be based on some regularities that came out of the long series of sunspot-numbers that covers more than 200 years. These regularities are contained in the sunspot curves given in Fig. 1 of the last year's report (WRTH 1967, p. 40).

As the cycle is proceeding, improved predictions of its remaining part can be given. Last year we had given for the highest smoothed sunspot-number $^{R}M = 110$ and for the time of the maximum 1968.4. During 1967 solar activity was rising a little steeper than expected so $^{R}M$ will reach a higher value, 120 rather than 110. This would shift the time of maximum to 1968.3. The mean yearly sunspot-number for 1964 was 10.2, for 1965 15.1 and for 1966 47.0. For the running year it will be around 93 and for 1968 about 115. During the maximum year the smoothed sunspot-relative-numbers will vary but to a little degree. They will rise from about 114 at the beginning of 1968 to its maximum of 120 and then drop to about 110 at the end of the year. In any case solar activity in 1968 will be very similar to that in the maximum year 1937. In that year the mean sunspot number was 114 and $^{R}M$ amounted to 119. Therefore conditions of short wave communications in 1968 will be the same as in 1937.

As in the past years, the daily relative-numbers for the expired month as well as predictions for the coming six months are emitted by the Swiss Short-wave Service. At present this information is emitted according to the following time-table:

| Destination of Emission | Time of Emission 1) | | Wavelengths in Metres |
|---|---|---|---|
| **English Emissions:** | | | |
| Europe | 08.20 | GMT * | 48.66 31.46 |

# THE EUROPEAN DX COUNCIL 1967

by Claës-W. Englund, Jur.kand., Secretary-General of the European DX Council, Uddevalla, Sweden.

Claës-W. Englund

Each year the WRTH publish a list of the DX clubs of the world. It is only an enumaration of the names and addresses of the DX-clubs concerned. But it is, however, that kind of information that is so valuable to the DX-ers and the DX club leaders. One of the facts picked out from the list in the WRTH, tells us that there are more than 80 DX-and SWL clubs in about 15 European countries. From this remarkable fact, the idea came up of establishing an EUROPEAN DX COUNCIL.

Until now there have been few opportunities to cooperate with DX-organisations abroad. To stimulate a close contact between the DX-clubs in Europe, the DX-Listeners Club in Norway sent out an invitation to establish an EUROPEAN DX COUNCIL in March 1966. This invitation caused positive reactions from Austria, Denmark, Finland, Great Britain, Holland, Ireland, Portugal and Sweden. A preliminary committee, consisting of DX-leaders from Denmark, Finland, Holland, Norway and Sweden with Mr. Ellman Ellingsen, Norway, as the secretary. was established at the 1966 DX Parliament at Skövde, Sweden.

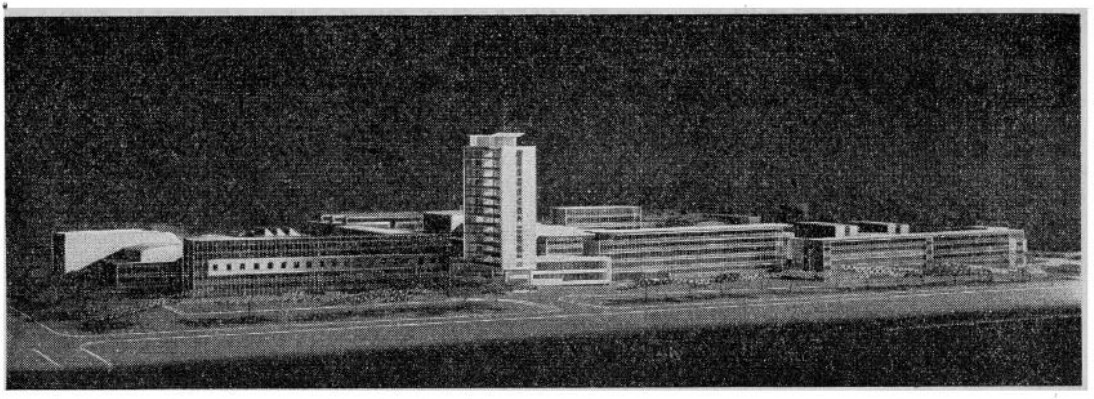
In April 1967 the preliminary committee published its final proposal and invited all European countries to send representatives to a meeting in Copenhagen, June 3-4, 1967. At this meeting Denmark, Germany, Holland, Norway and Sweden were officially represented and decided the foundation of the EUROPEAN DX COUNCIL, an organisation for DX-listeners Clubs in Europe.

The EUROPEAN DX COUNCIL will discuss DX-matters of common interest and make their achievements public in the form of recommendations. The aims of the Council shall be:

1) To promoted cooperation and goodwill between European DX-listeners and between European DX-organisations,
2) To achieve common objectives in the field of DX-ing,
3) To stay in close contact with other DX-organisations throughout the world, and
4) To improve contacts between DX-listeners and radio stations.

The members of the EUROPEAN DX COUNCIL are European countries and the DX-organisations of these countries choose their representatives to the Council, one from each country. Various Working Committees will be established, consisting of representatives of the Council with other DX-experts as consultative members.

*(continued page 41)*



POLSKIE RADIO I TELEWIZJA

BROADCASTS NEWS, MUSIC, FEATURE PROGRAMMES ON LONG, MEDIUM AND SHORT WAVES

FULL INFORMATION SEE POLAND

Four Working Committees have already been established:

A. **Reception Report Committee:** state common demands to a listeners reception report as given by radio stations, and approve the report forms produced by the DX-Clubs.

B. **Landlist Committee:** define DX-countries and thereby make a common DX-landlist.

C. **Contest Committee:** make standard rules for DX-contests and coordinate international contest and special programmes.

D. **Information Committee:** diffuse the knowledge about the DX hobby to other persons, organisations, radio firms, radio stations, etc.

The Council shall be political independent. Any organisation connected with the DX-hobby may have the opportunity to become an observer in the Council. In the event of a conflict between DX-organisations, the Council may act as arbitrator, if called upon by the parties concerned.

All European countries are invited to take part in this organisation in accordance with its Statute. Copies of this and other information of the EUROPEAN DX COUNCIL may be obtained from the Secretary-General, Mr. Claës-V. Englund, EUROPEAN DX COUNCIL, Klippgatan 1/419, Uddevalla, Sweden.

I believe that for the further development of the DX-hobby and the realisation of international understanding in the field of DX-ing, cooperation between European DX-listeners is vital and I am convinced that this can be achieved by closer unity between all like-minded DX-listeners in Europe. The new EUROPEAN DX COUNCIL will, I believe, prove to be a valuable initiative for the DX listeners and DX organisations in Europe.

**DX-Alliansen, Box 3108, Stockholm 3, Sweden.**

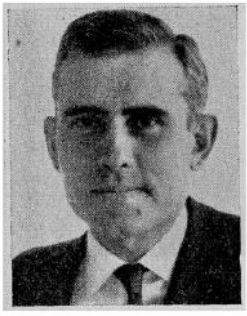
DX-Alliansen is an organisation founded ten years ago by the Swedish DX-Clubs, governed and controlled by them. There has always been comparatively many DX-clubs in Sweden and, of course, they have much in common. The purpose of DX-Alliansen is to serve the clubs in respect to all common interests and problems, to represent them in Sweden and internationally. The interest for DX-Alliansen among the clubs has on the whole always been at a high level. One of the main reasons for this is probably the yearly **DX-Parliament**, a gathering in which clubs and DX-ers are taking part together with for every year a rising amount of representatives of radio stations and radio organisations in Europe. In 1968 the DX-Parliament will take place in Norrköping, June 7-9. Please write us, if you are interested to take part.

**DX-Alliansen** publishes monthly a bulletin, Allians-Nytt. An English edition is published several times a year, and is distributed by Radio Sweden's DX-bulletin. DX-Alliansen also has a special, very nice, DX-badge for different numbers of verified countries.

**DX-Alliansen** appreciates correspondence with foreign DX-clubs to exchange views and to discuss common problems. We are proud to say that we are taking an active part in *European DX-Council*.

# THE INTERNATIONAL FREQUENCY REGISTRATION BOARD (I.F.R.B.)

*by Reginald Smith, Planning Department of the Board*



*Reginald Smith*

In order to appreciate fully the sense of the work of the I.F.R.B., it is necessary to look back some forty years to the beginnings of international frequency notification. Radio had made considerable strides in the mid-twenties, and the short-wave bands (which we now prefer to call the high frequency bands) were being opened up. There was a marked rise in the number of transmitters of all services and it became necessary to have some form of reference document which showed the frequencies and main technical characteristics of all radio stations.

In 1927 a conference was held in Washington to discuss problems of radiocommunications. One of the decisions of this conference was that the Administrations of Member Countries of the then International Telegraph Union (now International Telecommunication Union) should notify the frequencies and characteristics of stations under their jurisdiction to the Secretariat of the Union.

Due to the vast increase in the use of radio which took place in the years between 1939 and 1945 it was essential to go a step further in the development of effective international means for managing the radio frequency spectrum. An impartial body was required to examine the technical characteristics of new stations as they are notified and to determine whether such stations are likely to cause harmful interference to already existing ones.

The Administrative Radio Conference which took place in Atlantic City in 1947 therefore decided to set up the International Frequency Registration Board (I.F.R.B.).

The Members of the Board serve, in the words of the Convention of the I.T.U. ". . . . not as representatives of their respective countries, or of a region, but as custodians of an international public trust". The Board is assisted by an internationally recruited technical secretariat.

As already mentioned, the principal tool for maintaining order in the radio frequency spectrum is a central file on which appear the essential details (frequency, power, etc.) of radio stations throughout the world. Without such a file, Administrations would, when planning new radio transmissions, have insurmountable difficulties finding out with whom they might interfere or who might interfere with them. Consequently, they could not plan their operations.

To an outsider, there may not appear to be anything particularly difficult about keeping such a file in good order when he reads that, according to the Convention of the International Telecommunication Union, the I.F.R.B.'s first essential duty is "to effect the orderly recording of frequency assignments . . . . ". In practice, though, this is a task of considerable magnitude and complication.

The Master International Frequency Register (M.I.F.R.), as this central file is called, contains all the frequency assignments throughout the whole world which have been notified to the Board for the frequency range from 10 kc/s to 40 Gc/s (40,000 Mc/s). Some idea of its size may be gathered from the fact that the International Frenquency List, which is printed periodically from this file, takes up four volumes, totalling more than 4,500 pages of 154 lines each.

In an average month, the Board receives approximately 3,000 notifications of changes to the Register. These concern either new transmissions or modifications of existing transmissions. The way these notifications are handled depends upon the frequency band, the service of the station and possibly the part of the world in which the station is located.

About two-thirds of the notifications are such that they do not imply a likelihood of harmful interference resulting from the Administrations putting into service the proposed change. For the remaining third, a complete set of calculations (called technical examination) is made to determine their effect on existing transmissions already recorded in the Master International Frequency Register. If there is a likelihood that harmful interference will occur, the notifying Administration is informed of this and the frequency assignment notice is returned to it without an entry being made for it in the M.I.F.R.

The complexity of the task is apparent when one realizes that these calculations differ according to the service. Fixed, aeronautical mobile, maritime mobile and broadcasting all have to be treated differently, not to speak of such recent services as space communications. Yet, keeping the Master International Frequency Register is only one of the tasks of the Board. It has a number of other important duties, one of which is of special interest to the readers of the World Radio TV Handbook.

This concerns the "Procedure for the Bands Allocated Exclusively to the Broadcasting Service between 5,950 and 26,100 kc/s". In other words, the Short Wave Broadcasting bands.

This procedure came into being when it was realized that it would not be possible to prepare long-term frequency assignment plans for the high frequency broadcasting service. This was so because there were simply not enough frequencies available to provide each nation with a sufficiently large selection to enable it to cover all the directions and times of day for which it might be desirable to operate services in the future.

Instead, it was decided that Administrations should notify only those frequencies, the use of which was foreseen in the immediate future. It was furthermore decided that this information should be circulated to all Administrations as quickly as possible so that they might take note of any incompatibilities which could arise between their own assignments and

13 EAST 40TH STREET, NEW YORK, NEW YORK 10016

(continued from page 42)
those of other Administrations, thus enabling the necessary changes to be made before the new transmission actually came into service.

As radio propagation conditions vary from season to season the year has been divided into four parts:

1) March and April
2) May, June, July and August
3) September and October
4) November, December, January and February.

Administrations notify their planned high frequency broadcasting transmissions for each one of these seasonal propagation periods in advance. The I.F.R.B. processes this information and produces a document called the "Tentative High Frequency Broadcasting Schedule". Apart from showing the frequency power, directivity, transmitting antenna gain and planned reception areas for each transmission, it also shows the time of operation in graphical form. The Board indicates on the Tentative Schedule the incompatibilities occurring between notified assignments.

The Tentative Schedule is sent to Administrations two months before the commencing date of the period. This gives Administrations enough time to send their modifications to the Board and for it, in turn, to inform all other Administrations of the changes made. Changes made during the application of a Tentative Schedule are reported to Administrations weekly.

Some readers may have noticed when the changeover takes place from one Tentative Schedule to another. It is the first Sunday of the first month of the period concerned and the time of implementation for a new schedule is 0100 GMT.

Since this procedure has been applied, conditions in the high frequency broadcasting bands have improved markedly and this in spite of the rising number of stations. The procedure has led to coordination between various Administrations so much so that the frequency assignments which are notified by the Administrations concerned will not interfere with one another.

A striking effect of the procedure has been the progressive alignment of transmitting frequencies on to frequencies, the units position of which are either zero or five. This has resulted in a marked reduction of the number of annoying hetrodyne whistles encountered in the bands. A comparison of the frequency bands concerned in the table "Short Wave Stations of the World" in the World Radio Handbook for 1960 and the World Radio TV Handbook for 1967 shows this improvement clearly.

Another very important thing which the Article 10 procedure has rendered possible is that the new and developing countries have been able to find frequencies in the high frequency broadcasting bands for their transmissions. If there had been a rigid frequency assignment plan for the High Frequency Broadcasting Service, it would have been necessary to change this plan completely to accommodate the requirements of these countries, something which would have been difficult and costly because major changes to frequency assignment plans can only be made by specially called conferences.

The Board also deals with other matters concerning broadcasting. Board members have attended broadcasting frequency planning conferences since the inception of the Board, giving advice on regulatory matters. More recently the Board has made substantial contributions to the technical preparation of such conferences. Among these special mention should be made of the broadcasting frequency assignment planning conferences for Africa. The first in 1963 was concerned with television and F.M. sound broadcasting and the second in 1966 with low and medium frequency broadcasting. The 1963 conference was the first ever to make extensive use of an electronic computer for all technical calculations.

One could go on enumerating the various aspects of the Board's work which are connected in some way with broadcasting, but there is one without which a description of the work of the Board would be incomplete. It is technical monitoring.

The I.F.R.B. centralizes technical monitoring data received from monitoring stations throughout the world. This work is at present divided into two parts:

a) all transmissions observed between 2850 and 28,000 kc/s except high frequency broadcasting stations, mobile stations and amateur stations,
b) high frequency broadcasting stations.

These two sets of information are published periodically in the form of summaries. The first set is published monthly while the special high frequency broadcasting monitoring data is published six times a year.

It is hoped that the readers of the World Radio TV Handbook will have gained an insight into the work of the I.F.R.B. and the part it is playing in helping to improve listening conditions throughout the world. Obviously much still remains to be done, but like most things, it is the slow and steady progress which brings about the great improvements and it is in this spirit that the Board perseveres in its daily work.

**ATTENTION** all **RADIO STATIONS**

# RADIO BROADCAST RECEPTION CONDITIONS EXPECTED DURING 1968

*by George Jacobs, Chief, Frequency Division, Voice of American, U.S. Information Agency, Washington, D.C. 20547*

By international agreement, broadcasting stations are allocated the following specific bands in the radio spectrum:

| LONG WAVE (Low Frequency) | | MEDIUM WAVE (Medium Frequency) | |
|---|---|---|---|
| **Kilocycles** | **Meters** | **Kilocycles** | **Meters** |
| 150-285 | 1053-2000 | 525-1605 | 187-571 |

**SHORT WAVE**
Tropical Broadcasting Bands

| Kcs. | Megacycle Band | Meter Band |
|---|---|---|
| 2300-2495 | 2 | 120 |
| 3200-3400 | 3 | 90 |
| 4750-5060 | 4 | 60 |

**HIGH FREQUENCY BROADCASTING BAND**

| Kcs. | Megacycle Band | Meter Band |
|---|---|---|
| 3900- 4000 | 3.9 | 75 |
| 5950- 6200 | 6 | 49 |
| 7100- 7300 | 7 | 41 |
| 9500- 9775 | 9 | 31 |
| 11700-11975 | 11 | 25 |
| 15100-15450 | 15 | 19 |
| 17700-17900 | 17 | 16 |
| 21450-21750 | 21 | 13 |
| 25600-26100 | 25 | 11 |

While the majority of the world's broadcasting stations operate within these bands, some operate outside. Most out-of-band operations, however, take place on frenquencies adjacent to, or on the edge of the bands allocated for broadcasting.

The Long-Wave band (used in Europe) and the Medium-Wave Band (used worldwide) while allocated mainly for domestic broadcasting, are used also for some international broadcasting to adjacent countries. Although long and medium-wave stations are normally heard only for moderate distances, long-distance reception is possible over dark transmission paths, mainly during the fall, winter and spring months in the reception area.

The Tropical Broadcasting Bands are assigned for use for domestic broadcasting in tropical areas, where high atmospheric noise levels limit the service area of medium-wave stations. DX reception on these bands is best when the transmission path between the transmitter and receiver is all or mostly in darkness. These bands are used mainly by stations in Latin America, Africa, South and South-east Asia, and Oceania.

The High Frequency Broadcasting Bands, or short-wave bands as they are also called, between 3.9 and 26.1 megacycles (11 and 75 meters) are used for both international and domestic broadcasting. These bands are allocated for worldwide use, except that the 3.9 and 7 Mc bands are not allocated for broadcasting in the American area. Also, the 3.90 to 3.95 Mc portion of the 75 meter band is used only in Asia and Oceania.

Reception conditions on these bands vary according to the time of day and season of the year. Most of the international broadcasting stations make seasonal changes in frequency usage, mainly on the first Sunday of March, May, September and November. Changes may often be made at other times during the year, due to interference, change of program times, addition of new transmitters, etc. A large percentage of the domestic broadcasting stations operating in the high frequency bands do not make seasonal changes, but some, particularly the stations in India, Pakistan, USSR and South Africa, do make seasonal shifts.

Short-wave, long-distance medium, and long-wave broadcast reception is possible only because of the existence of an electrified region high in the earth's atmosphere. This region, electrified by nature, is called the **ionosphere.** It is the ionosphere, acting somewhat like a mirror, that reflects radio signals over great distances.

The ionosphere is believed to be caused, at least in part, by ultraviolet radiation given off by the sun. The amount of radiation illuminating the ionosphere varies hourly, seasonally and geographically, depending upon the relationship between the sun and the earth. Reception is usually better on the higher frequency bands (15, 17, 21 and 25 Mc) when the sun is more directly overhead or closer to the earth, for example, during the daylight hours, during the winter season, and in tropical or southern regions. Reception in the lower frequency bands (3.9, 6, 7, 9 and 11 Mc) is usually better when the sun is lower in the sky, or farther from the earth, for example, during the hours of darkness, during the summer season, and in temperate and northern geographical areas.

In addition to hourly, seasonal and geographical changes in reception conditions, there is a year-to-year change over an approximate 11-year cycle.

For reasons not yet fully understood by scientists, this 11 year cycle change appears to result from the difference in the number of sunspots appearing on the face of the sun. When the sun's surface is covered with a great number of spots, the ionosphere is electrically strong and long-distance radio reception is often at its best; when the number of sunspots diminishes, reception becomes poorer. During 1957-61, when the sunspot cycle was at or near its maximum, reception conditions were at their best. During the years 1963-66, there were few sunspots on the face of the sun, and reception conditions were considerably poorer.

A new sunspot cycle began during October, 1964, and the number of sunspots have been increasing steadily since then. According to daily observations of the sun made with powerful telescopes at the Zurich Solar Observatory, the present cycle which began with a sunspot number of 10 had risen to a level of approximately 100 by the end of 1967. Sunspot activity during 1968 is expected to climb well beyond 100, and may reach a level of 120 or more by the end of the year. This is a high level of solar activity, and should result in a noticeable improvement over last year in shortwave reception conditions, especially in the 11, 13, 16 and 19 meter bands.

# The video recorder that sets a new standard: The Ampex VR-2000

Ampex's Videotape Television Recorder, VR-2000 is expressly designed to operate on new high band standards.

It utilizes a new high band carrier/deviation frequency (7.16 to 9.3 mc), which permits a single standard for both colour and monochrome.

The VR-2000's performance specifications are impressive: a S/N ratio up to 46 db; basic frequency response to six megacycles; excellent transient response and virtually non-existent moire.

Performance is so good, in fact, that multiple generation copies made on the VR-2000 equal original tapes made on present equipment.

Although it possesses all this upper range ability, the VR-2000 is instantly switchable to present low band standards in either 625 or 525 lines. And for all its sophistication, it is the most reliable and easy to operate recorder ever built.

A complete line of VTR accessories is available now for the VR-2000: Intersync (standard on all VR-2000s); Amtec; Electronic Editor; Colortec; and Editec.

The VR-2000 and its accessories are products, not promises. The VR-2000 is presently in most of the world's television networks.

Write today for complete information.

**AMPEX**

*Videotape, Intersync, Amtec, Colortec and Editec are Trademarks of Ampex Corporation.*

**Ampex world headquarters is in Redwood City, California, and Ampex sales and service facilities are conveniently located in major cities throughout the world. (continued from page 46)

The following is a general summary of reception conditions expected on each short-wave broadcasting band during 1968:

**25 Mc band (11 meters)**

This is the year to have a receiver that tunes this band! Excellent reception conditions over very long distances is expected during the **daylight** hours from January through April, and again from September through the end of the year. Although reception is expected to fall off somewhat during May-August, good reception should be possible to many areas of the world even during these months. With improved reception conditions, a large number of international broadcast stations are planning to schedule transmissions in the 11 meter band, perhaps a greater number than ever before. If you own a receiver that tunes this band, you're in for some real surprises during 1968!

**21 Mc band (13 meters)**

Reception of exceptionally strong signals over distances of many thousands of miles, from all areas of the world should be possible during the daylight hours, or when it is daylight at one end of the path, and early evening at the other end. With the high level of sunspot activity predicted for 1968, almost all international broadcast organizations are planning to use this band throughout the year, and a very high level of congestion is expected.

**17 Mc band (16 meters)**

Excellent long-distance reception of stations from all areas of the world should be possible in this band throughout the year from shortly after dawn through the early evening hours. Almost all international broadcast organizations are planning to use this band during 1968, and a very high degree of congestion is expected.

**15 Mc band (19 meters)**

During 1968, propagation conditions in this band are expected to be excellent for the reception of both long-distance stations many thousands of miles away and stations from medium distances of several hundred, or a thousand miles away. The band is expected to be full of stations with exceptionally strong signals from shortly after sunrise, through the daylight hours and into the evening. During the spring and summer months, excellent reception may also be possible during the nighttime hours as well. Exceptionally long-distance reception is more likely to occur for a short period after sunrise, and again during the late afternoon and early evening hours. Medium-distance reception should be best during the late morning and early afternoon hours. With such favorable propagation conditions, and with so many stations planning to use this band, the congestion in the 19 meter band is expected to be greater than in any of the other short-wave broadcast bands.

**11 Mc band (25 meters)**

This is expected to be an excellent band for medium-distance reception during the hours of daylight. During this period, at any season of the year, exceptionally strong signals should be received from stations that are between approximately 500 and 2000 miles away (900 to 3400km). Long-distance reception from stations several thousand miles away should be possible for a short period after sunrise, and again during the late afternoon and early evening hours. During the summer months, both medium and long-distance reception should also be possible during the hours of darkness. Heavy congestion is expected in this band, especially during the late afternoon and early evening hours.

**9 Mc band (31 meters)**

This band is expected to be excellent for daytime reception over short-to-medium distances on the order of 400 to 1500 miles (700 to 2500 km). Fairly good long-distance reception, over many thousands of miles, should be possible throughout the year during the early evening hours, through the hours of darkness and until shortly after sunrise. Almost every short-wave broadcast organization is expected to use this band during 1968, and a high level of congestion is very likely to occur, especially during the early evening hours.

**7 and 6 Mc band (41 and 49 meters)**

Excellent short-range reception is expected on these bands during the daylight and early evening hours, for distances up to approximately 1000 miles (1650 km). During the fall, winter and early spring months, when static levels are low, fairly good medium and long-distance reception should be possible from shortly after sunset, through the hours of darkness and until shortly after sunrise. High static levels are expected to make long-distance reception somewhat difficult during the late spring and summer months. Fairly heavy congestion is expected in these bands, especially during the late afternoon and evening hours.

**4, 3 and 2 Mc bands (60, 90 and 120 meters)**

These bands are used mainly for short-distance reception. During the hours of daylight, stations within a radius of a few hundred miles should be heard well. After sunset, and throughout the hours of darkness, the reception range should increase to at least several hundred miles, and for the more powerful stations, to a thousand miles or more. During the summer months, high static levels are likely to make reception in these bands difficult at times.

For more specific reception information, please refer to the Table of the Most Suitable Meter Bands for 1968 (see page 56).

## We need *your* help

especially if you are an expert on Latin America and/or other continents.

The WRTH constantly invites assistance from experienced DX-ers with an expert knowledge of DX-ing on Latin America (and other continents) in order to procure supplementary information for use in the 1968 Summer Edition of the WRTH.

If you believe that you may be able to render us any assistance in this respect, please write further details.

# LISTENING TO LATIN AMERICAN RADIO STATIONS

*by Gote Johansson, Tore Larsson, Olle Alm and Zet Jacobsson.*

After some time of listening most DX-ers will find that the countries in Latin-America offer a great number of broadcasting stations. Those who study some of the great DX-bulletins of the world will certainly find that a special interest is often devoted to these stations. There are many reasons for that. The great majority of the transmissions from this part of the world come from private commercial stations giving pleasant, popular programs with a special atmosphere and feeling. These radio stations are usually small and intended to cover just a limited part of the country, a province or a city and therefore are difficult to hear at longer distance. We have written this article to give some information about Latin-American DX-ing to those who still don't have much experience in this subject.

**Where on the dial can you find these stations?**

The main part of the Latin-American stations broadcast on 540 — 1600 kHz on medium wave and in the 49, 60 and 90 meter bands on short wave. With a medium wave transmitter they normally cover a town or a part of it; a short wave one is meant for the whole province where the station is situated. The antenna power is often low, usually between a couple of hundred watts up to 10 kilowatts. Only a few transmitters are more powerful. Controlling these numerous broadcasting stations — especially those outside the city areas — has proved to be difficult with the consequence that many transmitters are not kept in a perfect condition. That's why the frequency in many cases can be different from the official one and the modulation of the sound remarkably bad. It is therefore extremely important for you to check the identification of every station you are tuning to. Besides those mentioned above there are several Latin-American station in the 31, 25 and 19 meter bands, especially some powerful Brasilian ones which are quite easy to hear; and sometimes it is possible to hear a few stations in the 75 and 120 meter bands.

**Which stations can you hear?** On long distances the audibility of a transmitter is based upon several different factors, for instance the antenna output power and, more important, the construction and situation of the antenna. This makes some stations more frequently heard than others. Indeed it could cause a real sensation for some stations to be heard in Europe.

Further, conditions play a very important part. Latin-American stations are more easily audible during certain seasons and some countries are more often heard than others. In Northern Europe April-August is the most suitable time for shortwave listening to Latin-American stations. Both on medium and on short wave stations from Mexico, Central America and most from Ecuador, Peru and Bolivia are considered to be difficult to hear and require a special effort.

Reception conditions also vary from day to day (or night to night) with "tops" once or a few times per month. On such occasions you may hear some unusual stations together with the more regular ones coming through with good signal strengths.

Finally, reception conditions on the medium wave and tropic bands (120 and 60 meter bands) depend on how much sunspot activity there is (this varies on

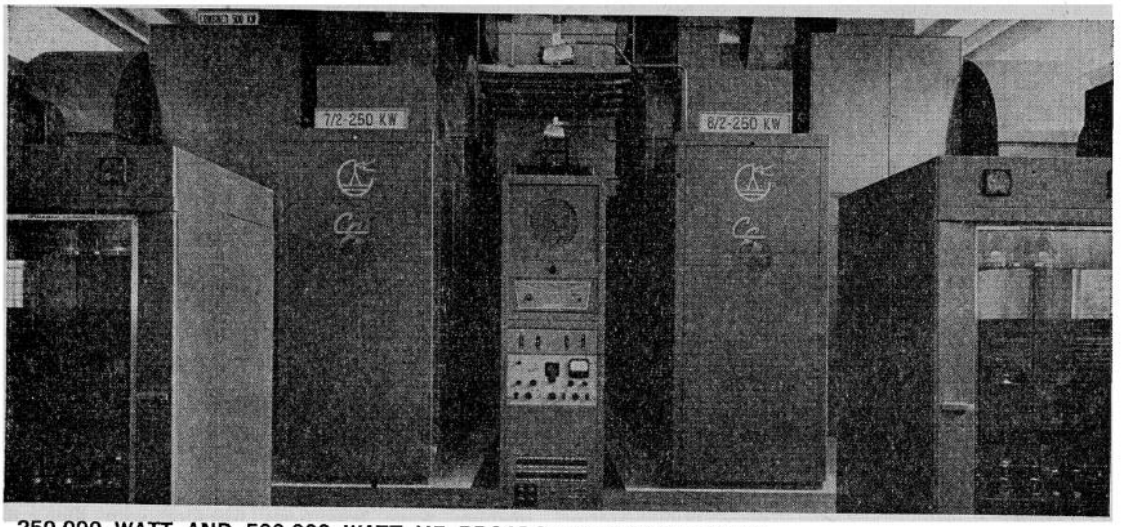
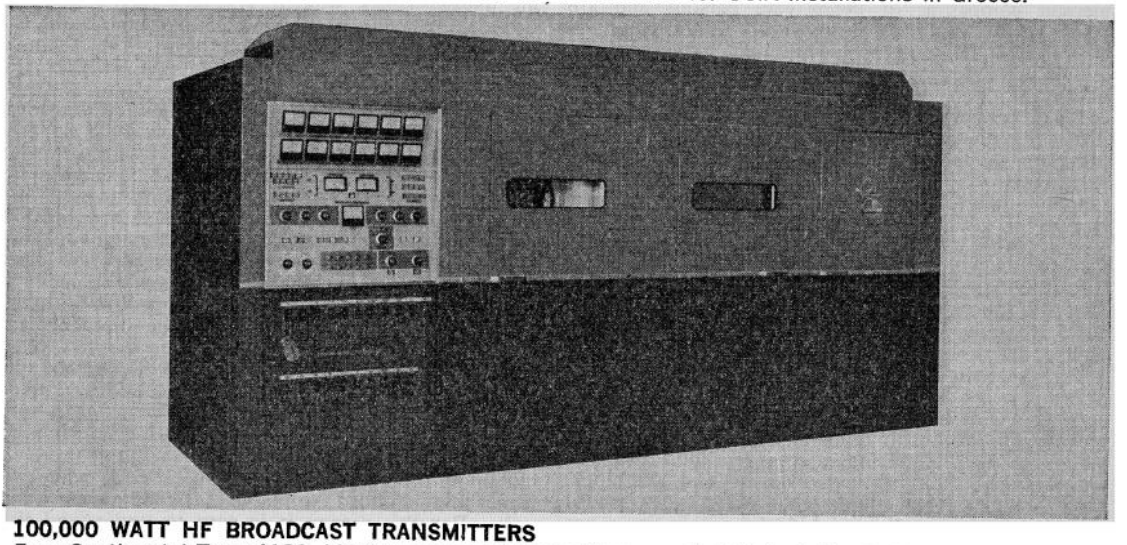
# CONTINENTAL ELECTRONICS SUPER POWER TRANSMITTERS AROUND THE WORLD



**250,000 WATT AND 500,000 WATT HF BROADCAST TRANSMITTERS**
Partial view of the Radio Liberty Committee Installation near Barcelona, Spain. This station uses four Continental 250,000 watt HF transmitters; two are combined for 500,000 watt operation. The USIA uses six Continental 500,000 watt HF transmitters at their Greenville, North Carolina Station. Continental is also building ten 250,000 watt HF transmitters for USIA installations in Greece.



**100,000 WATT HF BROADCAST TRANSMITTERS**
Four Continental Type 418B 100,000 watt HF transmitters are installed at the Emissora Nacional de Radiodifusão broadcasting station in Lisbon, Portugal. Two Continental 100,000 watt HF transmitters are installed in Pakistan.

*Continental transmitters range from 5,000 watts to 1,000,000 watts. For descriptive brochures, write: Continental Electronics Mfg. Co.; Box 17040; Dallas, Texas 75217.*

Continental Electronics
A SUBSIDIARY OF LTV ELECTROSYSTEMS, INC.

(continued from page 50)
an eleven year cycle and is currently increasing).

The suitable times for Latin-American DX-ing vary from place to place, but a good rule is that it has to be dark over the major part of the way between transmitter and receiver. In northern Europe the best time is from 23 to 04 hours G.M.T.

**Interference.** Most of you will have certainly heard the weak signals from Latin-American transmitters being greatly worsened by disturbances, broadcasting or commercial traffic. Especially in the tropic bands the commercial traffic such as cable and wireless (CW), telephoto etc. is causing a lot of trouble by blocking several frequencies over considerable periods. On medium and short wave (other than the tropic bands) interference is more caused by strong broadcasting transmitters occupying frequencies during all or a part of the good listening time. In order to reduce this interference as much as possible it might be a good idea to have a sensitive receiver and more than one good antenna of different construction. Antenna problems could fill a whole book and there is already so much written about the subject that we prefer to refer you to other articles for your information. On the lower frequencies, below 6 MHz, the reception during summer is often disturbed by noise from thunderstorms which can completely destroy the reception, the quality of the receiver or antenna is of very little importance in this case.

**Types of stations and their programs.** Most of the Latin-America radio stations are owned by commercial companies or by private persons and are often small with few employees. Many countries also have a network of Government-owned stations giving more serious non-commercial programs such as concerts, discussions or lectures. Finally, there are a considerable number of cultural stations often owned by the church with educational and religious programs on their schedules.

In order to be able to transmit programs they cannot afford to produce themselves, a growing number of the commercial stations join greater radio organizations. It can be important to know that these organizations sometimes have certain interval signals in common and on co-transmissions you can hear the identification of one of the stations taking part. It is advisable not to send reception reports on such co-transmissions.

The great majority of the Latin-American stations transmit programs consisting of music and commercial spots and sometimes short news bulletins. They are usually on the air at 06-24 hours local time but may also operate during a considerably shorter or longer time, some of them even around the clock. Some stations have commercials after every record played, others give them in blocks a few times per hour. Only some of the largest stations vary their schedule with sporting, cultural or news programs and commentaries. Each station usually has its own style with a preferance for a special kind of music, e.g. tropical dance music or romantic music. They also vary the type of program at different times of the day depending on what the majority audience is expected to be.

**Brasilian Short Wave Radio Stations.** The DX-er's very first contact with Latin-American broadcasting is usually made by hearing some of the large Brasilian stations in the 25 or 31 meter bands. Their signals are often strong around the year and particularly during rather dull conditions. The language used is Portuguese. The programs are generally held in the same style as those of other Latin-American stations: music, commercials, news, sports (football!) and on some of them also cultural and more serious discussions. Especially during the weekend many of them transmit reports from football-matches which may cause reporting problems. On such occasions co-transmissions are not unusual.

Your reception reports should be formed in the same way as to other Latin-American stations and preferably written in Portuguese. English may be accepted at the largest stations. An international Reply Coupon enclosed to your report is generally appreciated. Unfortunately many of the Brasilian stations with best reception are very reluctant to verify as they are always swamped with reports from all over the world.

**DX-ing on the BC-band (medium wave).** In addition to what has been written above we feel that it is necessary to give a little information about Latin-American radio stations broadcasting on medium wave. This part of the hobby requires special expertise from the DX-er and therefore cannot be recommended to the beginner. The extension of the medium wave conditions together with the great number of stations transmitting here are elements combining to cause this. Another reason is the capriciousness of the BC-band. For instance, one night you can find the conditions are quite good in a certain area and the following night nothing at all there. That's why it generally takes years of listening to find out the mysteries of the band and to get a thorough knowledge of it. The antennas are a very important detail when you listen to this band. Their syntony and direction are of extreme importance if you want to obtain the best possible reception. If not, you may very well be satisfied with a more simply equipped receiver as the stations on the BC-band are not quite so close to one another on the dial as their short wave fellowstations. This provides of course that you don't have any local or other high powered station in the neighbourhood that can cause interferences. This is a severe problem for the European medium wave listener who wants to listen to Latin-America. Many European nations have greatly increased the number and strength of their transmitters over the last few years. Also for some reason the "super-power" stations now seem to be used for night-programs too. This is very much to be regretted as in Europe it is only possible to hear these overseas stations during the night.

Almost all the Latin-American medium wave stations are intended to serve their home-audiences only. For this reason it is easy to understand that these stations have very little interest in knowing how they are received abroad. In spite of this and small staffs they are sometimes kind enough to reply DX-ers' reports.

The BC-band-listening has considerably more to give the DX-er than the short wave. It offers you many surprises — not always happy ones — and the only sure way to check what station one is listening to is by recognizing the call sign.

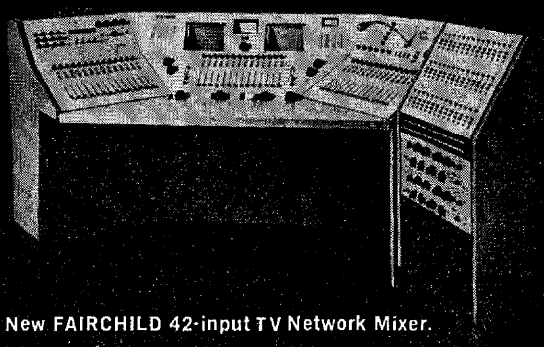
**How do you most easily obtain verification (QSL)?** Well, there are many different opinions on the subject. These are a few guide lines.

(continued page 54)

# SUPER SOUNDS

start with

# FAIRCHILD



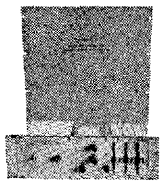
New FAIRCHILD 42-input TV Network Mixer.

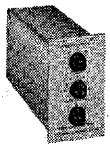
## FAIRCHILD REVERBERATION SYSTEMS...

Now FAIRCHILD has created two electro-mechanical reverberation systems that produce a sound termed by recording studio mixers – the experts who know what they hear – as "extremely natural sound possessing the quality of good acoustical reverb chambers." The two models differ more in their flexibility and cost rather than in reverberation effect.

**MODEL 658A**

The 658A is a complete solid state reverberation system with electronically controlled reverb time adjustments up to 5 seconds; mixing control for adjustment of reverberated to non-reverberated signal ratios; reverb equalization at 2, 3 and 5 KHZ. Size: 24½ x 19"

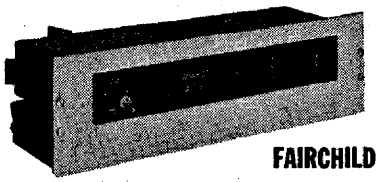




**MODEL 658B**

Compact, reverberation system for the 'big' sound in a small space. Contains reverb equalization in mid and low frequency range; level control; solid state design.
Size: Only 5¼ x 3 x 10" deep.

The "sound" of the Model 658A and 658B REVERBERTRONS will satisfy the most demanding audio engineer. Their pricing and size makes them even more appealing.

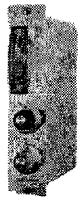


## FAIRCHILD CONAX

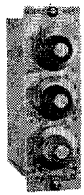
The world-accepted standard to control high frequency spillovers due to preemphasis. Maintain high levels even with brass and crashing cymbals in FM and recording.

## FAIRCHILD COMPACT COMPRESSOR MODEL 663

Allows creation of those **up tight** levels that contribute materially to presence and loudness combined with overload protection. The FAIRCHILD Model 663 Compact Compressor produces no distortion despite the amount of compression used... no thumps, no noise. The 663 provides adjustable release time and up to 20 db of compression. Model 663NL comes with unity gain and additional gain if needed with + 18 dbm output.

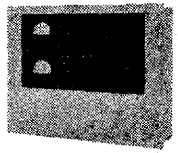


## FAIRCHILD PROGRAM EQUALIZER MODEL 664NL



An ideal no loss equalizer for broadcast and recording. The FAIRCHILD Model 664NL allows the production of the "hot, solid commercial" sound standard with major recording studios; transforms any conventional console into 'Big Board sound'. 1½" x 5¼" high unit provides equalization up to 10 db at 4, 6, 8, 10, or 15 KHZ and low end equalization up to 10 db. Rolloffs also provided. The Model 664NLB has equalization at 2, 3, 4, 5, and 7.5 KHZ for motion picture demands. The FAIRCHILD Program Equalizer contains equalization plus 18 dbm amplifier output. Put life into your sound with the FAIRCHILD Equalizer.

## FAIRCHILD LIMITER MODEL 670



Fast attack Stereo Limiter (50 microseconds) with low distortion and absence of thumps. Sum and difference limiting position eliminates floating stereo image. Includes regular channel A and B limiting. Dual controls, dual meters provided. Used throughout the world. Flexible release times make it indispensable in stereo recording and broadcasting.

*(continued from page 52)*

A printed report form is often enough if you report some of the largest stations, but not always. The form must be printed in Spanish for the Spanish-speaking countries and in Portuguese or English for Brasil. To most of the station we advise you to enclose a personal letter written in the language of the country or possibly in English to Brasil. DX-ers who don't have the requisite knowledge of the language should get some linguistic genius of a friend to write a form of letter which can be used for all the reception reports.

In this letter you must state the exact time in G.M.T. and the frequency when you heard the station how good or weak the reception was and what interference it suffered from. When you describe the signal strength or audibility you must avoid using the usual Q- or SINPO-codes, because hardly any Latin-American radio stations understand the meaning of them. It is better to use plain expressions such as "good", "rather good", "rather weak" etc. translated into the right language. The program details are as always a very important part of the report. You must not only prove that you heard that station but you must also show such an interest in the programs that the station has a good reason to reply. The report should cover at least half an hour's listening, preferably one hour or more. The DX-er himself must judge how many details he wants to enclose but it is an advantage to include a substantial part of what you have heard during the time of listening. Such details as commercial spots for goods or companies, program titles, names of disc-jockeys or other program participants should be given. Please note that no Latin-American radio station ever enters the titles of the tunes they play into their logs. Only if absolutely necessary should you include information about what kind of music was played or a special resume of some program.

At the end of your report you can briefly give a description of your receiver and antenna(s) and a few words about yourself and the place where you live, and if you wish, give some comments on the program. Most importantly the report must contain a great deal of information in a form which is easy to read.

As regards QSL you must not have too high expectations. It is natural that the stations are not able to reply to all the reception reports they receive. A few stations do however verify regularly; many of them reply to the first letters they get; others only to the most interesting letters. It is not unusual for many stations to reply consistently over a period and then not at all. There is also unfortunately a considerable group that prefer never or at least after a very long interval to reply. Many of these can be easily heard in Europe and are therefore up to their ears in reports. Usually it is of no value to enclose an International Reply Coupon except maybe for Brasil. These coupons cannot be cashed outside the capitals without great trouble. It is also advisable to send your reports by air mail although it costs a little more, as they should be as up to date as possible when they reach the station. Airmail is also safer than surface mail. As only a few Latin-American stations transmit external programs (e.g. "HCJB", "LRA" and Radio Habana) most have no particular interest in how they are received outside

# 12 SECONDS or less

## with Collins' new computer-controlled 250-kw transmitter

Collins' new 821A-2 high power transmitter offers 12-second frequency changes. That's for a change all the way across the 3.95- to 26.5-MHz range. For changes between closer frequencies, the time is less.

A Collins computer designed into the transmitter automatically controls, monitors and performs diagnostic routines on the 821A-2. Transmitter readings and status indications are visually presented to the operator.

A specially developed filter ensures harmonic and spurious rejection of 80 db—well in excess of CCIR recommendations.

The 821A-2 is designed for a wide range of installation arrangements. A weather-proof high voltage enclosure requires no indoor floor area, thereby reducing transmitter building costs. Indoor units (AF and RF modules) are pre-wired, tested and shipped as subassemblies. Total indoor floor space is 67 square meters.

For more information on this 250-kw transmitter, contact us today.

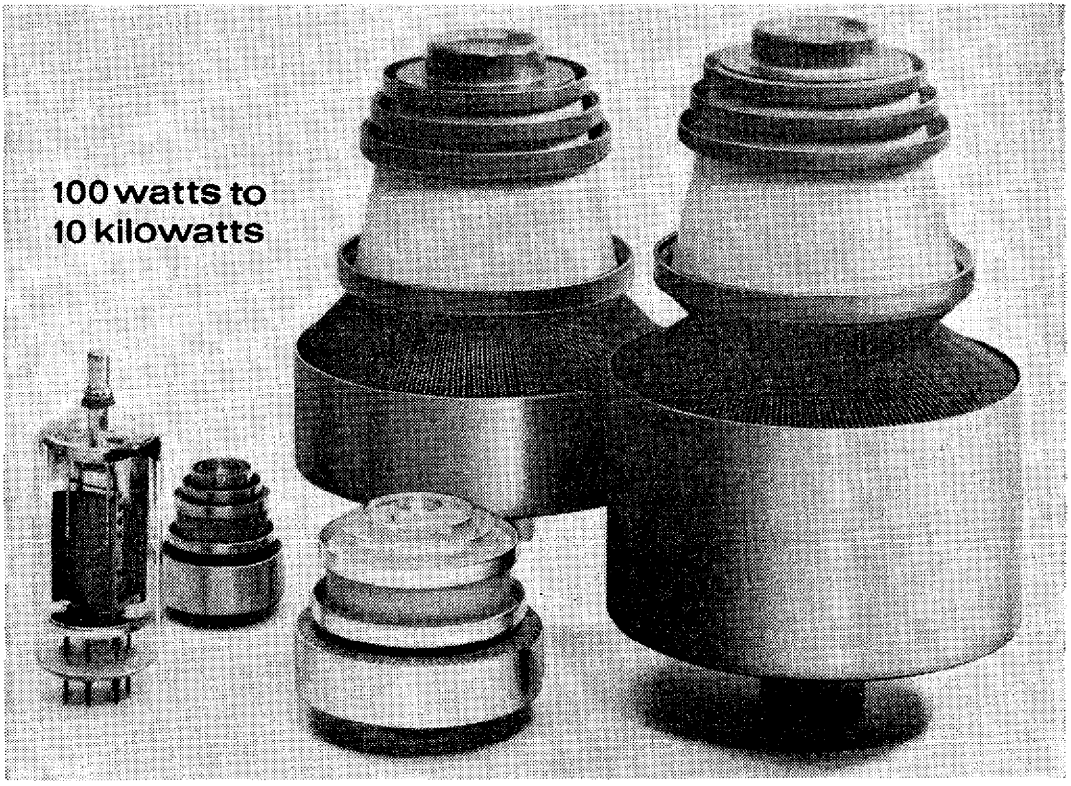
# 5 TUBES FOR SSB



**EXCEPTIONAL LINEARITY:** see table

**MODERN DESIGN:** metal-ceramic envelope*

**LOW INTERNAL LOSSES:** coaxial construction and ceramic insulation

**LONG LIFE AND HIGH RELIABILITY:** hard and stable vacuum

*YL 1150 with glass envelope

ASK FOR COMPLETE DATA ON THESE AND OTHER TUBES IN OUR EXTENSIVE RANGE OF TRANSMITTING AND RECTIFYING TUBES.

| tube | power in load | intermodulation distortion better than | maximum frequency |
|---|---|---|---|
| YL 1330 | 10 kW | -40 dB | 225 MHz |
| YL 1121 | 5 kW | -40 dB | 110 MHz |
| YL 1230 | 1 kW | -40 dB | 225 MHz |
| YL 1110 | 500 W | -40 dB | 1200 MHz |
| YL 1150 | 100 W | -30 dB | 110 MHz |

**PHILIPS** guarantee of world-wide availability and prompt delivery

# THE CHANGING WORLD OF MANAGEMENT COMMUNICATIONS

*by Mark Foster,*
*Management*
*Telecommunications*
*Systems, Inc.*
*New York*

The growth of giant multi-national corporations has forced top management to take a new look at internal, as well as external, communications techniques. Although highly sophisticated techniques have been used for what we call mass communications — advertising and public relations — very little attention has been given to the area of internal communications directed to the corporate family and/or distribution system.

Traditional efforts have been limited to the printed word with corporations leaning heavily on memos, bulletins, house organs and the like, in order to communicate to their corporate family.

As the corporate family increased in size, diversified and decentralized, it became more complex for top management to reach its specialized audiences on a regular basis.

In the past decade or so, electronic communications, computers and other electronic devices have come into wide usage to make information dissemination and data processing more rapid and more efficient. It was thought at one time that the "electronic age" would displace many workers, but this was not true. As a matter of fact, the new technology has created many additional new jobs, but these jobs have required extensive training of personnel before they could be performed.

Let's look at the dramatic changes taking place around the world. What is this new communications technology like? What can it do to help accelerate the management process in industry, in government and education?

Internationally, the channels available for all communications have added a greater capability. The present synchronous satellites provide 240 or more voice/data channels, or a television channel, over both Atlantic and Pacific. Next year, the Intelsat III system will multiply this capacity by five times. Within a decade, we can expect satellites accommodating 42,000 voice/data channels or two dozen television channels available for all forms of management electronic communications.

Transistorized cables will soon add many new circuits under the ocean. Laser communications may multiply transmission capacity even more in the future. Thus, new dimensions of economy and flexibility are being added almost daily to our worldwide communications capability.

The communications revolution also gains momentum from the new role of computers at the management level — absorbing, processing, and comparing data. New large screen displays now provide dynamic interface techniques permitting large groups to view computer readout simultaneously — in one location or in multiple-city networks.

The new technology is breeding novel methods of interchanging print, picture, and sound. Electronic eyes read written or printed characters and transmit their substance over microwave channels or into computer circuits. Pictures are transmitted in digital form and reconstructed by computers.

All of this will dramatically alter the concept and conduct of multi-national businesses. Information and training will flow back and forth in growing volume over the new super-highways of communication — through space and across oceans. Communicating with all parts of a global enterprise will become as easy as communicating within the United States.

A sales vice president in New York or Detroit will have constant call on current conditions affecting his local markets anywhere in the world.

A director of engineering will be supplied in sight and sound with a steady flow of data on conditions that affect construction or production operations overseas. He will be able to bring together expert consultants in many countries simultaneously by television through closed-circuit conferences.

Training Directors will have a worldwide closed-circuit television complex for orientation and employee training throughout the company. He will be able to train and upgrade skilled workers and managerial talent in great numbers utilizing tele-controlled audio-visual aids.

Such electronic devices as large screen closed-circuit television bring about a direct, almost one to one, confrontation between top management and the man in the field.

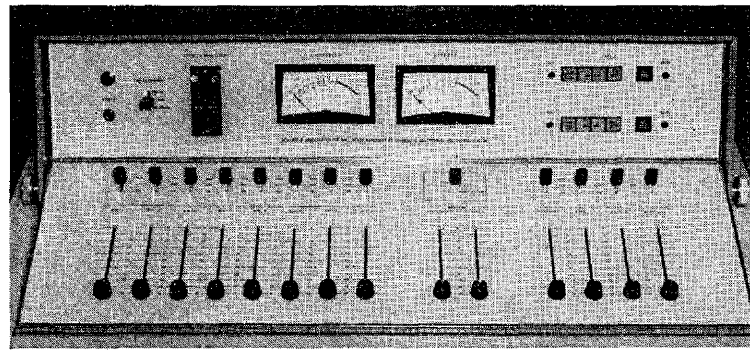
This contact, on a regular basis, can cover the full range of corporate communications, from marketing and employee training, to community and financial relations.

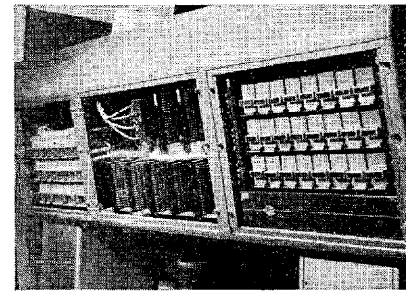
New types of organisations such as Management Telecommunications Systems, Inc. are emerging to provide top management, as well as middle management, with a total system for his electronic communications needs. These systems encompassing hardware and software, integrate all corporate communications to form, in effect, an electronic management communications system. These systems interconnect corporate headquarters with regional and branch offices, both in the U.S. and overseas. They make possible direct — non-diluted — messages from top to bottom rung.

We are living through a communications revolution of unparelleled proportions and, as a result, greater changes have taken place in mankind in the past fifty years than that which occurred in the previous 25,000 years.

Management has a remarkable opportunity before it today to extend its experience, heretofore limited to the more sophisticated societies, to its multi-national operations and thereby to much of the less developed world. Global management telecommunications — **in sound and sight** — can make possible a more efficient, more prosperous world for all.

# ALTEC'S
## new studio equipment makes the beauty of these custom consoles more than skin deep!





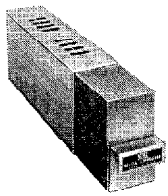
Though they're located many miles apart, these beautiful new custom control consoles have one thing in common—Altec's most recent studio products.

For example, one console utilizes 43 Altec 9470A solid-state plug-in amplifiers, the other 14! The reason for choosing this advanced, all-silicon amplifier is immediately apparent from the description below.

Other Altec components in these sophisticated consoles include 9550A solid-state power supplies, 9061A program equalizers, and the advanced straight-line attenuators.

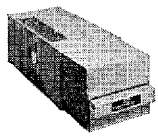
These are just a few of the many new products with unique advantages available for your custom console from the world's largest manufacturer of sound equipment exclusively. Before you build *your* "dream console," be sure to take a look at the latest and the best—from Altec!

### NEW ALTEC 9470A AMPLIFIER



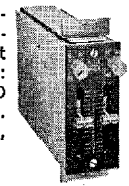
This unit can serve as preamp, line, booster or program amplifier with no internal changes. All-silicon transistor circuitry delivers 0.5 watt; Frequency response, 20-20,000 cps ±0.5 db; THD, less than 1%, 20-20,000 cps @ +27 dbm; Noise level (unweighted, 10-25,000-cps bandpass), equivalent input noise, —127 dbm (input unterminated); Overload recovery, 5μs for 100% overload.

### NEW ALTEC 9550A POWER SUPPLY



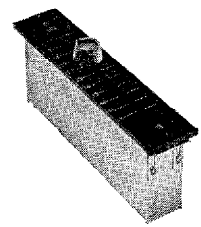
This all-solid-state unit can power up to fifteen 9470A amplifiers at full output! External sensing circuit ensures constant output voltage regardless of line-voltage fluctuations. Under full 2-amp load, output ripple and noise is only 200μv RMS.

### NEW ALTEC 9061A PROGRAM EQUALIZER



This passive unit provides continuously variable equalization at selectable frequencies: up to 12-db boost at 40 or 100 cps and 10 kc. Straight-line controls, plug-in mounting.

### NEW ALTEC STRAIGHT-LINE ATTENUATORS



Extremely low-noise attenuators feature gold-tipped bifurcated sliding contact brushes. Sliding bearings are made of friction-free Delrin and slide on polished chrome-plated shaft. Available in slide wire and step type models.

### ALTEC PUTS NEW THINKING FOR BETTER PERFORMANCE IN ALL ITS STUDIO AND AUDIO CONTROLS PRODUCTS!

The equipment here is but a small fraction of the advanced Altec audio products you can use to build a better console. Other off-the-shelf audio control items include graphic and microphone equalizers, filters, precision networks, matching pads, rotary attenuators, precision rotary switches, dynamic and condenser microphones, monitor speakers plus several new products on the way!

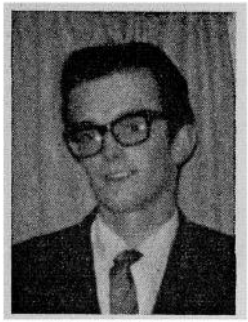
# THE ANARC FREQUENCY RECOMMENDATION COMMITTEE



Roger Camire

The Association of North American Radio Clubs is a neutral organization uniting over a dozen of the leading radio DX clubs in the United States and Canada, and acting as their spokesman, and as a single, united voice for DX-ers and international radio listeners in North America in general.

In January of 1965 the ANARC put forth a proposal for the formation of a committee which would study Shortwave broadcasters' frequencies and upon request, recommend changes in North American beams. It was projected that such a committee would be of great assistance to the DX-er and broadcaster alike.

Under the reigns of Richard Wood, a prominent DX-er, the committee was formed in March, 1965. It consisted of several true DX-ers in key reception areas of America, chosen for their skill and excellent equipment. On March 14, letters were sent to all major stations announcing the committee and inviting them to submit current and future schedules, with an eye toward their study by the committee in a serious, responsible attempt to improve frequency choice and transmission hour selection, thus insuring interference-free reception.

In answer to the first exploratory letters, Trans World Radio, R. Cairo, Amman, Bucharest, Beirut, Netherlands, Australia, Sweden, and the U.S.S.R.'s Ministry of Communications all reported interest in the project, though it was apparent that some doubts about the committee's usefulness existed.

The first success for the committee came in the Fall of 1965 when Bonaire adjusted frequencies on recommendation with good results. Participation soon followed by R. Sweden, Deútsche Welle, R. Prague and R. Portugal. By late '66 the BBC, R. Vatican, and others were also consulting the committee on a regular basis. By this time the committee had established itself as a responsible organization of great value to international broadcasters.

Early in 1967 Mr. Wood transferred the chairmanship of the FRC to me. After preliminary notations to the stations and monitors involved, work continued as usual, attempting to handle all requests for clear frequencies and evaluation of schedules as soon as possible.

Operation of the committee is designed to facilitate rapid processing of schedules. When a schedule is received it is outlined for American target areas and posted. The frequencies and times are placed on a sheet and checked for reception periodically for a week or more. At the same time, a copy for Western America is sent to monitors in that area. The presence of interference if noted objectional, is identified and filed. A sheet listing clear frequencies on each band at various times is also kept. After a report from the other monitors and a check for supplementary information in club bulletins, a full evaluation of each outlet is made and forwarded to the station in question. Also included are several clear frequencies in the troubled meter band if they are needed or available. These are chosen from the stations listed alternate frequencies whenever possible. Sometimes, an entirely different meter band may be recommended for better results. This is evaluated from propagation charts and general quality of reception of stations in the area for a given time.

While membership in the committee changes occasionally, present members include August Balbi, Art E. Glover, and myself. Several other DX-ers offer sporadic information as well, and upon special request, it is possible to enlist ANARC member clubs for a special project or to resolve a difficult reception problem.

Having participated in this field for only a short time, I am now convinced that responsible frequency management can do the work of a large number of transmitters, many of which would be wasted, generating QRM, one useless channels, and at the same time elminate the present overcrowding that exists.

While much has been accomplished during the past few years, a great deal more could be done. The entire key to the future success of the FRC is co-operation. Without it, we are but a single voice in the wilderness, lost in a myriad of station reports which are often ignored or answered only out of courtesy.

The ANARC Frequency Recommendation Committee invites stations beaming to North America to submit their future schedules to us for consideration and possible comment by the committee monitors. Broadcasters presently experiencing interference will gladly be sent recommendations for alternate frequencies or transmission hours, based on extensive study, to enhance reception on the North American Continent.

*Roger Camire, Chairman FRC.*

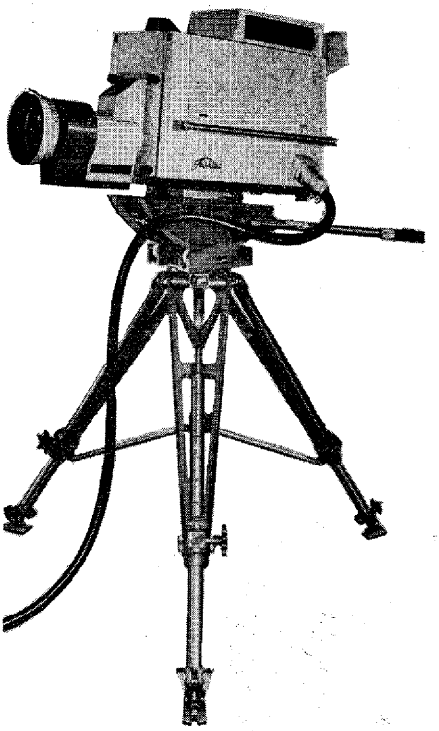
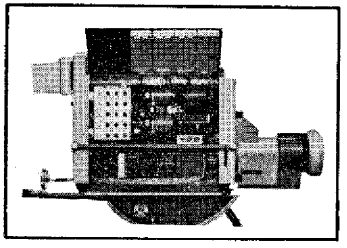
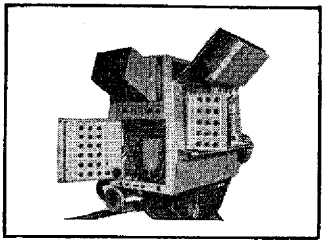
# CAMERA HEAD:
# 12″ x 23″ x 18½″ — 110 lbs

## Hard to believe a commercial TV color camera can be so compact?







Not hard at all . . . when it is Toshiba TV broadcast equipment! Besides being compact, the Model IK-37 camera chain provides improved compatibility and sharper pictures with wider gray-scale on both types of receiver, color and black-and-white. A 3″ Toshiba imageorthicon tube for Y signal and three Toshiba SENSICON tubes for C signal, arranged for easy servicing in this camera head, give signals that are ideal for colorplexing and equal in quality to any straight monochrome signals.

- All solid-state circuits with high-grade Toshiba semiconductor elements throughout the chain.
- Lightweight and easy-to-pan camera.
- Plug-in units for simplified maintenance.
- SENSICON tubes with nearly 100% conversion efficiency and twice as high sensitivity as that of ordinary vidicons.
- Optical system and coil assemblies fixed rigidly and reliably in an anti-shock arrangement.
- No need of adjusting the picture in view finder as its input is fed back from the controller.
- Provisions for mounting servo-operated zoom lens and for d-c remote control (up to 40 yards) of the zoom.

QUALITY SINCE 1875

# RECORDED MUSIC LIBRARIES

Most Recorded Music Libraries operating in England supply Recorded Music, often specially commissioned, generally of varied character (although some may specialize) and designed especially to meet the needs of programme producers in the fields of television, film and radio.
Recordings are usually available on disc (either specially-produced 78 r.p.m. for facility of groove location, or microgroove) although ¼in. tape versions at 7½ and 15 i.p.s. full track are often available by arrangement and some two-track stereo may be offered.
Conditions of usage vary in different territories but it should be pointed out that both the musical works and the recordings thereof are the copyright property of the owner-publisher and the public performance by any means is subject to the requirements of the Performing Right Society, 33 Berners Street, London W.1 (or their representatives in the territory concerned). Moreover, the supply or purchase of recordings does not automatically grant any permission to copy or re-record the material on to film soundtrack or any other sound-reproducing medium. Such copying is normally permitted, however, subject to licence issued in England by the copyright owner direct or on his behalf by a representative organisation (the Mechanical Copyright Protection Society, Elgar House, 380 Streatham High Road, London S.W.16) specializing in the collection of mechanical fees and the issue of relative licences. Producers are advised in their own interests to ascertain licencing details in advance to avoid any possibility of infringement. It should be checked also that the items concerned are available for world-wide distribution should such a need exist.
Prices and conditions of usage will gladly be supplied by the publisher concerned from whom also a classified catalogue can be obtained.

## BACKGROUND MUSIC

*by R. A. Sweetman, Licensing Manager, Mechanical-Copyright Protection Society Ltd.*

R. A. Sweetman

The studio falls silent, the stars depart for their next assignment, and cans of film commence their journey through process after process until the day the Editor says to the tea boy: "Sweep that lot up from the cutting room floor!" What is left is a distillation of the product of many craftsmen, lacking only what the technicians call an "M & E" track. Somewhere in the depths of the studio, the "Sound Man" will be peering myopicly at a mixing sheet, considering what he is going to use to fill the pregnant silences of the picture so recently dropped on his bench. He will need music and effects and if the picture is a modest one, or time is short, it is practically certain that he will look to the music library for 78 or 45 rpm discs and tapes at all speeds, and the labels will bear somewhere upon them the words "Mood Music".

The history of this fourth class of music (as distinct from "Classical", "Standard" or "Popular" music) is a curious one. It can really be traced back to the year 1909, when Meyer de Wolfe first started to produce sheet music of the works of hitherto unknown composers for the use of pit orchestras for the stage and "biograph". With the coming of the "talkie" in 1928, the call was for music on 35mm film tracks for ready transfer, and Mr. de Wolfe, with foresight, began to supply it. By 1935, other music publishers, notably Bosworth & Co. Ltd., and Boosey & Hawkes Ltd. of London, began to see the need for such music, but by now the call was for 78 rpm records. All these firms exist today, but although the music may still be classed as "mood music", the demand is now for LP discs and tapes.

What of the composers of this unique form of music? In the early days many unknown composers had their first start with the "mood music" libraries, and only occasionally did well known writers enter the field. Boosey's, for example, used works of Gustav Holst and Vaughan Williams in their "Photoplay" Series, but today the demand is primarily for quality and excellence of reproduction, and together with the march forward of recording techniques there has developed what might be called a "specialist" composer who is a technician — producing material tailored to his medium of radio, television and film. No longer is such material regarded as "Pot-boilers" to provide a pittance to enable the composer to retire to his garret to work on his symphony. Names which come to mind are Robert Farnon from Canada, Trevor Duncan, King Palmer, Ronald Binge from Britain, Jack Shaindlin and L. E. de Francesco from the U.S.A. and Roger Roger from France. Today their names are legion, and I offer my apologies in advance to those I have not mentioned — to list them all would fill a book. Many of their works have become standards or even "pops" — tunes like "Coronation Scot" (Farnon), "Little Suite" (Duncan) (used as titles for the B.B.C. TV series "Dr. Finlay's Casebook"), "Elizabethan Serenade" (Binge). Listeners to the B.B.C. country radio programme "The Archers" — which has an extensive following in many parts of the world — will be familiar with "Barwick Green" which heralds its commencement and finish.

Even so, music that has become well-known is not good mood music, which often has to rely on its background character for its ability to blend harmoniously with a visual accompaniment, or its anonimity to create a dramatic effect without distraction. Much care is now given even to the shortest pieces, and one can find in the libraries anything from miniature suites, where matching movements can be of only a few bars' duration, to full works, carried on several records, which can be used both in their entirety and separately. Many short stings, bridges and links together with arpeggios and glissandos, have been carefully designed to fit all types of requirement. Works have even been written for drums.

One of the main advantages of using music from Mood libraries is that copyright problems familiar to most users of other music do not arise. Many composers and copyright owners of classical music object to their material being used as background music, and popular tunes at the height of their popularity may well prove expensive. The principal difficulties are, of course, the time taken to secure copyright consent to the use of such works, and the inability to budget for costs in advance. Few radio

(continued from page 62)

and television organisations have the time to deal with such matters in addition to the pressures of programming, and this is where the advantages of the possession of a Mood music library become apparent. The production of high quality musical material is itself costly for the manufacturer and those costs are usually recovered by copyright payments by the user in proportion to the uses made. In the case of "Mood music" the form of payment may vary from country to country, or from manufacturer to manufacturer, but the basic principle applied is that the material should be available without the necessity for prior negotiation, and charges are standard throughout the range of material offered. Collection of copyright fees is often made through local copyright protection societies, with whom broadcasting authorities may already have made agreements.

Owing to the nature of this kind of music, and the many thousands of titles available, it would be difficult to order material by title. To assist users, most libraries issue catalogues of their repertoire, which list their titles under such headings as "Comedy", "Dramatic", "Romantic", etc., etc., and many libraries offer a selection service to meet purchasers' special requirements. Where local agents can be reached, music can be heard and chosen at leisure.

Readers will find at the end of this article, the names of many of the main libraries, and where possible, local agents are quoted. Catalogues will be supplied on request — either to the agent or Head Office.

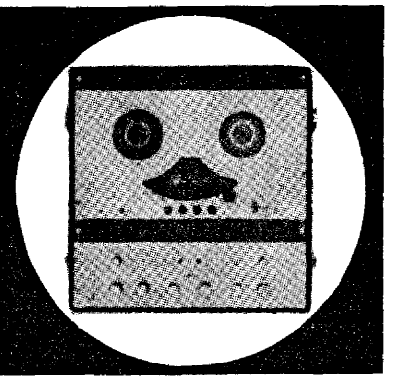
# SUPPLIERS FOR YOUR COMPLETE BROADCAST REQUIREMENTS

## TELEX 600 HEADPHONE

Some of the exclusive Serenata features available for the first time: Full year warranty; Electronic tone control; comfort control dial; detachable cord; liquid filled ear cushions.

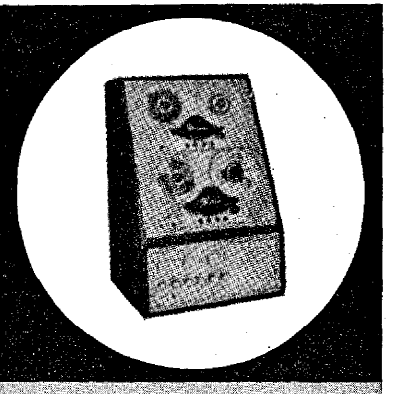
SPECIFICATIONS: Frequency Response: 20-20,000 cps. Sensitivity: 92 db SPL/mw. Impedance: designed to operate on 600 ohm output. Maximum Continuous Power Input: 2 watts. Distortion: at Normal Listening Level less than ½%. Weight: (less cord) 16 oz. Cord Length: 8 ft., detachable. Color: Dark Brown and Beige.

## VIKING TAPE TRANSPORT MODEL 230



Model 230 tape transports are designed for today's advanced technology in industry, business, research or education; and numerous installations attest to their rugged reliability. A heavy duty three motor tape transport, the model 230 is ideally suited for all remote controlled and automatic applications. A variety of head configurations and interchangeable head block assemblies, plus other optional features make it a highly versatile unit. New solid state modular amplifiers, monaural model RP 110 and stereo model RP 120 match 230 tape transports in dependability and design.

## VIKING TAPE DUPLICATOR SERIES 235



Feature simple, convenient operation. The Viking 235 tape duplicating system is designed so a non-technical user can operate the system after a few minutes of familiarization with the equipment. A single AC power switch turns the entire system on and off. Tape is easily loaded in the same manner on master and slaves. The entire system is operated from the master transport push-buttons when recording/duplicating. The system automatically stops at the end of a duplication. All tracks of a master tape can be simultaneously copied in one pass. Full, half and quarter track, and one, two or four channel tape duplicating systems available.

## A MESSAGE FROM THE EDITOR

This 22nd edition of the WORLD RADIO TV HANDBOOK has been extended and kept up-to-date with the advice of specialists and consultants in the field of radio and television in order to assist those who desire to obtain as complete and practical information as possible about the various radio and TV stations throughout the world.

It has been our aim with the 1968 edition to enable everyone to have a complete and practical basis on which to start or continue listening to broadcasts (on shortwave in particular) from near and far-away countries and thus create the possibility for a better international understanding.

It would be impossible to list all the names of the many people whom we have consulted about the new material — friends who have made valuable contributions to this book. We thank them for their help and interest in our work.

I want to thank specifically the many broadcasting and TV organisations, radio clubs, faithful contributors, advertisers, etc., who have made this edition possible.

The WRTH 1968 has been written and compiled for *you* entirely. Consequently we will be more than happy to receive your criticism and suggestions with regard to improving and extending the contents of the present edition.

J. M. Frost
Editor

# FOR MAXIMUM RELIABILITY

# Sintronic

# AM & FM TRANSMITTERS

- Trouble-free Performance
- Simplest Design
- Latest Concepts
- Easy Maintenance

**MODEL NO. FM 250A**
**250-WATT**
**FM BROADCAST TRANSMITTER**

*Only* 23" wide, 26" deep and 48" high.

- DESIGNED FOR STEREO AND MULTIPLEX

- MEETS FCC SPECIFICATIONS
- COLOR CODED WIRING
- SILICON RECTIFIERS
- DESIGNED FOR REMOTE CONTROL
- PRE-TUNED TO CUSTOMER'S FREQUENCY
- NO NEUTRALIZATION REQUIRED
- SEPARATE TEST UNIT FOR ALL EXCITER FUNCTIONS
- MAXIMUM ACCESSIBILITY — WITHOUT SPECIAL TOOLS

## Computerised Lighting Control for the Stage and Television

With Q-File more than a hundred pre-programmed lighting plots can be individually selected, added or subtracted by cut or crossfade at the press of a button.

Special Features

* Dimmer levels are electronically recorded.
* Automatic fade or crossfade can take place in a time variable between 1 sec. and 1 hour.
* Independent fades within fades.
* Lighting plots can be prepared without disturbing lights already in use.
* Instant access is always possible to all channels for modification purposes.
* Control panel is only 2 sq. ft. in area.

Q-File is a versatile electronic tool which greatly reduces the burden on the lighting operator and provides the lighting director with a new found freedom to exercise his artistic skill.

Shure's remarkable new SM50 omnidirectional dynamic microphone is SELF-WINDSCREENED! It is strikingly immune to wind noises and explosive breath sounds—making it ideal as a dependable "workhorse" microphone for remote interviews, news, sports pick-ups and a variety of field and studio applications. The five-element built-in windscreen makes it virtually pop-proof in close talking situations. And unlike other "built-in" windscreens, this one is "unitized" and self-contained with no bits or pieces to assemble after cleaning. In fact, you can actually rinse dirt, saliva, lipstick and other screen clogging foreign matter out of the windscreen assembly under running water as often as needed—or replace the "unitized" assembly if necessary in a matter of seconds.

Additionally, the SM50 is the cleanest sounding professional microphone at anywhere near its price class. It delivers highly intelligible, natural and pleasing speech and vocal music that is especially full-bodied and rich in the critical mid-range.

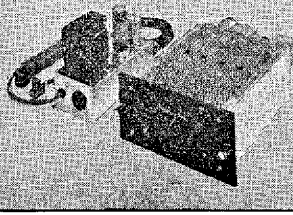
It is extremely rugged and will require little or no down time as the years go by. Too, when comparing it to other moderately priced omnidirectionals, it is lighter in weight, supremely well-balanced for "handability," has a detachable cable, and a rubber mounted cartridge for minimizing handling noises. The SM50 is worthy of your most serious consideration. For additional information, write to Shure Brothers, Inc., International Sales, 222 Hartrey Avenue, Evanston, Illinois 60204, U. S. A.

**SHURE SM50**

OMNIDIRECTIONAL DYNAMIC MICROPHONE

**SHURE STATION-TESTED AUDIO CIRCUITRY EQUIPMENT**

Shure stereo equalizer and preamplifiers are praised as MAJOR contributions to upgrading station quality by broadcasters.



**SE-1 Stereo Transcription Preamplifier**

Provides precise RIAA equalization from magnetic phono reproducers at line levels. Separate high and low frequency response trimmers. Lowest distortion, noise level, susceptibility to stray RF fields.

**M66 Broadcast Stereo Equalizer**

Passive equalizer compensates recorded frequency to three playback characteristics: RIAA, flat, roll-off. Provides precise equalization from magnetic pickup at microphone input level.

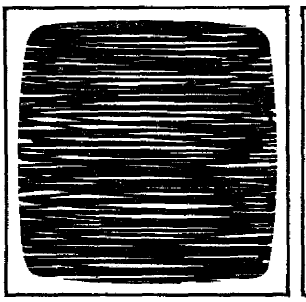
Gevachrome films are television minded.
From the very earliest
experiments of colour television
Agfa-Gevaert technicians
were present in order to prepare
a new range of colour reversal films
matching the most exacting
requirements of
colour television technique :
controlled
image contrast,
exact density
range, very
high definition
and perfect image stability.



GEVACHROME
FILMS

GEVAERT

Gevachrome Original films,
Type 6.00 (50 ASA) and 6.05 (125 ASA)
for the camera ;
Gevachrome Print film, Type 9.02
with a contrast which can be modified
for release or television prints.

# STANDARD FREQUENCY & TIME SIGNAL STATIONS

The ordinary sw, listener soon notices a specialized technical prgr. of tones and time pulses usually received on carrier freq's of 2.5, 5, 10 or 15MHz and sometimes on 20 and 25 MHz, if he listens in that part of the spectrum. These signals have many uses in science and technology. They are most useful to the non-specialist in obtaining accurate time, in checking the calibration of his radio receiver, and in gaining information on radio propagation conditions. The forecasts of the present and future state of the ionosphere can be quite useful in determining the possibilities of sw-reception. The forecasts are given by WWV and JJY for certain parts of the globe.

---

**R. STATION WWV, WWVH, WWVB and WWVL (Gov.)**
St. WWV, Box 83-E, Route 2, Fort Collins, Colorado 80521, USA: Eng-in-charge L. Honea. St. WWVH, Box 578, Puunene, Maui ,Hawaii: Eng-in-Charge S. Katahara. WWVB/WWVL, Box 83-E, Route 2, Ft. Collins, Colo, USA: Eng-in-Charge R. F. Carle — **L.P:** Chief Freq. and Time Broadc. Sce's: D. H. Andrews, National Bureau of Standards, Boulder, Colo. 80302.
**Standard Radio Frequencies:**
WWV 2500kHz 2.5kW, 5000kHz 10kW, 10000kHz 10kW, 15000kHz 10kW. 20000kHz 2.5kW, 25000kHz 2.5kW: The broadc. are continuous, night and day, exc. from 45 min. to 49 min. past each h — WWVH 2500kHz 1kW, 5000kHz 2kW, 10000kHz 2kW, 15000kHz 2kW: Continuous exc. from 15 mn. to 19 min. past each h — WWVB 60kHz 13kW: Continuous — WWVL 20kHz 1.8kW: Continuous, except for exp. changes.
**Program:**
WWV transmits radio propagation forecasts in International Morse Code every 5 min's just preceeding the voice ann's; the IUWDS "Geoalert" is broadc. in International Morse Code each h from WWV during the 18th min. and from WWVH during the 48th min. Universal Time is ann. from st's in Intern. Morse Code each 5 min. Att WWV a voice ann. of Greenwich Mean Time is given each 5 min. as follows: "National Bureau of Standards, WWV, Fort Collins, Colo. Next tone begins at . . . hours, . . . minutes Greenwich Mean Time". At WWVH a voice ann. of Greenwich Mean Time is given each 5 min. as follows: "National Bureau of Standards, WWVH, Maui, Hawaii. Next tone begins at . . . hours, . . . minutes Greenwich Mean Time". WWVB transmits a special time code consisting of lodb carries reductions each second for 0.2, 0.5 or 0.8 sec. (Format on request). Transmitted phase will be advanced 45° for 5 min. each h between 10 min. and 15 min. after the hour. No special identification will be given. When WWVL identifies, call letters are given by keyed carrier in Intern. Morse Code on the h and every 20 min. thereafter. Immediately following identification, the freq. offset (parts in $10^{10}$) is given in Intern. Morse Code by keying the carrier, the word "minus" indicating the minus sign. V. by QSL-card or letter. **Pub:** Prgr. sched. on request. In addition to the 20kHz carrier other exp. freq's near 20kHz may be transmitted alternately or simultaneously.

**STATION LOL**
**Addr:** Observatorio Naval, Avenida Costanera Sur 2099, Buenos Aires, Argentina — **L.P:** Dir. Gen: J. E. Marpegán.
**Standard Freq. and Signals:** 5000 kHz 2 kW — 10000kHz 2kW 15000kHz 2kW: From 00.00 1st Sun. in Oct. to 00.00 1st Sun. in April: 11.00-12.00, 14.00-15.00, 17.00-18.00, 20.00-21.00, 23.00-24.00; From 00.00 1st Sun. in April to 00.00 1st Sun. in Oct: 12.00-13.00, 15.00-16.00, 18.00-19.00, 21.00-22.00, 00.00-01.00 — **Schedule:** 3 min dash (1000 or 440cs alternately) beginning at 00.00, 00.05, 00.10 etc. Then 3 x LOL in morse followed by "Observatorio Naval Argentina" followed by hrs & min's, preceding dash tone. T.S. transmission at min. 55-59 in each h — **V.** by QSL-card or letter. Re. wanted.

**STATION VNG — AUSTRALIAN POST OFFICE**
**Addr:** Station VNG, c/o Assistant Dir. Gen, Radio Section, Postmaster-General's Dept, 57 Bourke St, Melbourne C.1, Australia. **Cable:** "Gentel".
**Stations:** Lynhurst: 5425kHz 1kW: 12.00-12.30, 7515kHz: 12.00-22.30 (10kW), 22.30-12.00 (1kW) — 12005kHz 10kW: 22.30-12.00 — The st. has bursts of 1000c/s per second tone each second, exc. the 59th second of each min. Just before each h a recording is played: "This is an Australian Post Office time signal tr. from VNG in the 5.5, 7.5 or 12 MHz bands" — **V.** by QSL-card.

**MOUNT STROMLO OBSERVATORY**
**Addr:** Mount Stromlo Observatory, Australian National University, Box 4, P.O, Canberra, A.C.T, Australia. **Te:** Mt. Stromlo 511. **Cable:** Solarob — **L.P:** Chief Time Sce: H. J. M. Abraham. Sen. Techn. Officer: J. N. Boots.
**Stations:** VHP2 4286kHz/VHP3 6428.5kHz/VHP4 8478kHz/VHP5 12907.5kHz/VHP6 17256.8kHz (all 10kW): 00.25-00.30, 07.55-08.00, 13.55-14.00, 19.55-20.00; VHP7 22845kHz 00.25-00.30, 07.55-08.00.

**OBSERVATÓRIO NACIONAL, Brasil**
Originates time signals, which are broadcast by stations PPE & PPR.
**PPE: Addr:** Serviço da Hora, Observatorio Nacional, Rua Gen. Bruce 586, Rio de Janerio, GB ZC-08, Brasil — **L.P:** Chief Eng: C. G. Lacombe — **Station:** 8721kHz: 13.25-13.30, 20.25-20.30, 00.25-00.30.
**PPR: Addr:** Radio Rio, Av. Francisco Bhering, Arpoador, Rio de Janeiro, GB — **Stations:** 435, 8634, 13105, 17194kHz. 14.25-14.30, 21.25-21.30, 01.25-01.30.

**DOMINION OBSERVATORY, Canada**
**Addr:** 3 Observatory Crescent, Ottawa 6, Ontario, Canada. **Te:** 232-8211 — **L.P:** Adm: Dr. J. Hodgson. Dir. Tec: M. M. Thomson.
**Stations:** CHU 3330kHz 90.09m 3kW — 7335kHz 40.90m 3kW 14670kHz 20.45m 3kW — **T.S.:** Continuous by voice and seconds pulses — **Ann:** English: "CHU Canada, Eastern Standard Time". French: "CHU Canada, Heure normale de l'est" V. by QSL-card. Re. welcomed — **Pub:** Station information free.

**STATION CCV,CHILE**
**Addr:** Instituto Hidrográfico de la Armada, Casilla 324, Valparaiso —
**Stations:** 8558/12960kHz: 11.15-12.00, 13.55-14.00, 15.55-16.00, 21.55-22.00, 00.55-01.00.

**STANDARD FREQUENCY STATION OMA**
**Addr:** Budecska 6, Praha 2, Vinohrady, Czechoslovakia. **Te:** 258758 — **L.P:** Dir: B. Sternberk — **Stations:** OMA 50kHz 20kW: 24 h — OMA 2500kHz 1kW: 24 h — OLB5 3170kHz 8kW: 24 h — OLD2 18985kHz 30kW directed to F. East: Wed, Fri 12.45-1300 — **Ann:** In morse-code — **V.** by QSL-card. Re wanted.

**CENTRE NATIONAL D'ETUDES DES TELECOMMUNICATIONS**
**FFH: Addr:** 196, rue de Paris, 92 Bagneux, France. **Te:** 532-40-00. **L.P:** Chief Eng. Freq. Dept: P. la Maida. Chief Eng: B. Decaux.
**Station:** FFH 2500kHz 5kW: 08.00-16.25 (Mon-Fri) — **Ann:** in Morse on the 9th and 49th minute, in voice in the 10th, 30th and 50th minute followed by morse.

**BUREAU INTERNATIONAL DE L'HEURE**
**Addr:** 61 Avenue de l'Observatoire, Paris 14, France — **L.P:** Dir. B. Guinot — **Stations:** St. André de Corcy FTA91 91.15kHz 45kW: 08.00, 09.00, 09.30, 13.00, 20.00, 21.00, 22.30 Pontoise FTH42 7428kHz 6kW: 09.00, 21.00 — FTK77 10775kHz 6kW: 08.00, 20.00 — FTN87 13873kHz 6kW: 09.30, 13.00, 22.30 — **V.** by letter.

**ZLFS, LOWER HUTT, New Zealand**
**Addr:** Physics & Engineering Laboratory, Lower Hutt, New Zealand.
**Station:** 2500kHz 0.3kW: CW only Wed 01.00-04.00 — **Ann:** St. identification is made in morse code at the beginning and end of each tr.

**DCF77, MAINFLINGEN, Germany**
**Addr:** Physikalisch-Technische Bundesanstalt, Braunschweig, Bundesallee 100, Fed. Rep. of Germany. **Cable:** "Bundesphysik". **Te:** 5921 — **L.P:** Pres: Prof. Dr.-Ing. M. Kersten; Dir. of Dept. I: Prof. Dr. U. Stille; Dir. of Sect. IA: Prof. Dr. U. Adelsberger; Dr. Ohl, Dr. Süss — **Station:** DCF77 77.5kHz 12kW, nd transm. extends essentially from 06.45-10.35, 19.00-20.10 and around every full h until midnight. Call-sign DCF77 in morse-code, amplitude modulations 440 and 200 c/s. Interruptions every second (duration 50 ms). **Pub:** Prgr. sched. on

**GERMAN HYDROGRAPHIC INSTITUTE**
**Addr:** P.O. Box 220, 2 Hamburg-4, W. Germany. **Te:** 311121. **Cable:** Hydrodienst. **L.P:** Head Time Sce: Dr. H. Enslin.

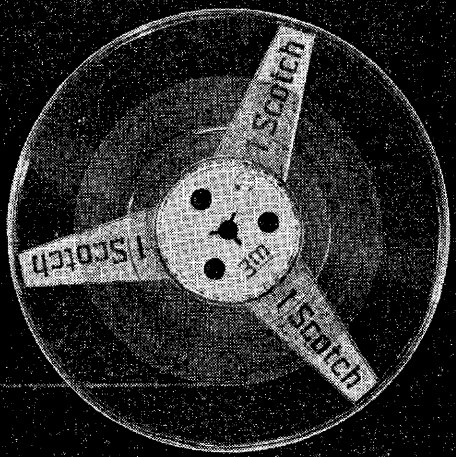
*(continued page 80)*

## PROBLEM: SLOW THREADING



## SOLUTION: THIS NEW 3M SELF-THREADING TAPE REEL

Simply lay tape inside reel and start recorder. Reel threads itself automatically. No hooks, no slots, no hand winding. Solid sides protect tape against damage. "Scotch" Brand 7" Self-Threading Reel has a snap-tight plastic cover for dust-proof storing without a box.

## PROBLEM: TOO MUCH NOISE

## SOLUTION: NEW 3M DYNARANGE RECORDING TAPES

New "Scotch" Brand Tapes (in both acetate and polyester) increase signal-to-noise ratio 3db to 6db over conventional tapes. Improve high frequency response. Wear 15 times longer. Save tape because they operate at half your normal recording speed with no loss in fidelity.

**Scotch**® BRAND TAPES AND REELS are among scores of new 3M audio-video advances. More information? Write: 3M, Minnesota Mining & Manufacturing Co., International Division, Box 3800, St. Paul 1, Minnesota, U.S.A.

# More than meets the ear.

. . . Radio New York Worldwide is an International Short Wave Radio Station broadcasting to the world in the English and Spanish languages.

WNYW IS . . . NOT . . . a government owned or government supported radio station. It is an independent example of the American free enterprise system, financially supported by commercial advertisers.

WNYW newscasts are live, factual, up-to-the-minute and uncensored. The commentaries are timely, stimulating and informative. As the International affiliate of the American Broadcasting Company, WNYW has its choice of ABC news and documentary programs. Arrangements have also been made with other major radio networks for the use of their news and public affairs programming.

WNYW IS . . . the fastest, most complete source of financial news available to the international businessman. Live reports are broadcast throughout the day from the floors of the New York and American Stock Exchanges. WNYW's own financial news analysts also report several times daily on business happenings in the United States and around the world.

WNYW IS . . . a complete news and information service keeping the International radio listener better informed.

WNYW IS . . . a Bonneville International Station.

**NEW YORK 10022 USA**

**Ann:** Call sign given seven times in morse at minutes 9½-10, 19½-20, 29½-30 on the H.F. transmissions, and in the half minute preceeding the hour and half hour on the 60kHz transmission except between 14.30 and 15.30 when it is the same as the H.F. schedule — **V.** by letter.

**ROYAL GREENWICH OBSERVATORY**
**Addr:** Time Dept. Herstmonceux Castle, Hailsham, Sussex, England. **Te:** Herstmonceux 3171. **Cable:** Observer.
The international t.s's are radiated by GBR 16kHz (reserve: GBZ 19.6kHz) at 03.00, 09.00, 15.00 & 21.00 and on high freq's at 09.00 and 21.00.
The freq's used are selected according to current ionospheric predictions. Freq's available: GIC24 4025kHz, GAY25 5807kHz, GIC27 7397.5kHz, GPB30B 10331.5kHz, GIC33 13555kHz, GIC37 17685kHz (Powers: GBR 350kW, GBZ 250kW, others 15kW) — QSL-cards not available.

**ATA, NEW DELHI, INDIA**
**Addr:** National Physical Laboratory, New Delhi.
**Stations:** 10000kHz 2kW: 05.30-10.30.

**IAM, ROME, ITALY**
**Addr:** Istituto Superiore, Ministereo P.T. Rome.
**Station:** 5000kHz 1kW — All days exc. Sun 07.30-08.30.

**IBF, TURIN, ITALY**
**Addr:** Istituto Elettrotecnico Nazionale, Corso Massimo d'Azeglio 42, Torino. **Te:** 688773 — **Station:** 5000kHz 5kW: W 06.45-07.00, 08.45-09.00, 09.45-10.00, 10.45-11.00, 11.45-12.00, 12.45-13.00, 13.45-14.00, 14.45-15.00, 15.45-16.00, 16.45-17.00, 17.45-18.00 — **Ann:** "Emissioni di frequenze e tempo campioni dal l'Istituto Elettrotecnico Nazionale" — **V.** by letter.

**STATION JJY**
**Addr:** Radio Research Laboratories, Koganei, Tokyo, Japan. **Te:** (04.23) 81-1661 — **L.P:** Chief Freq. Standard Division: Y. Saburi — **Stations:** all 2kW nd, 24 h: 2500kHz — 5000kHz — 10000kHz — 15000kHz — All freq's are interrupted at 29-34 min. past each h. Mod. seconds pulses of 8 cycles of 1600c/s, and 1000c/s tone — **Ann:** At 34-35 min's & 59-00 min's in each h. identifying signals are tr. consisting of callsign in morse code (twice), time in JST once in morse code, callsign twice in voice, time in JST once in voice and grade of propagation warning in morse code — **V.** by QSL-card.

**TOKYO ASTRONOMICAL OBSERVATORY**
**Addr:** Mitakashi, Tokyo. **L.P:** Asst. Chief, Time Division: Dr. S. Iijima. **Station:** Oyama (Oyamashi, Tochigiken) JA22 16170kHz 10kW: D 12.25-12.30 directed to Europe.

**STATION OBC, PERU — Addr:** Estación Central de Comunicaciones Navales Radio, Callao, Perú. **Stations:** OBC 490/12307kHz: 15.55-16.00, 18.55-19.00, 00.55-01.00.

**REP. OBSERVATORY SOUTH AFRICA**
**Addr:** Republic Observatory, Johannesburg. **Te:** 43-2026. **Cable:** Astronomer — **L.P:** J. Hers — **Stations:** Call ZUO: Olifantsfontein 5000kHz 4kW — Johannesburg 10000kHz 0.25 kW — Johannesburg 100MHz 0.050kW directional: 24 h per day, exc. for interruptions 15 to 25 min. past each h.
**Time Signals:** Continuous second pulses, consisting of 5 cycles of 1000c/s tone. The minute pulse is prolonged to about ½ second — **Ann:** In morse code every 15 min's (just before each quarter hour): ZUO, ZUO, ZUO followed by the Universal time of the next minute — **V.** by letter will be answered if they are genuine reports.

**US NAVAL OBSERVATORY,** Navy Department, Washington, DC. 20390, USA. **L.P:** Dir. Time Sce. Div: G. M. R. Winkler. **VLF Time Signals** are aired from 55 to 60th min's as follows: **NSS** (Annapolis): each h on 21.4kHz. **NBA** (Canal Zone): each h exc. 23.55-24.00 on 24.0kHz — **HF Time Signals,** begin 5 min's before the hour & terminate on the h.
**NSS** (Annapolis): each h on 21.4kHz. NBA (Canal Zone): 1621kHz*, 5870, 9425, 13575, 17050.4, 23650kHz (* exc. Thurs 13.55 & 17.55 when on 121.95kHz) — **NPG** (San Francisco): 23.55, 05.55, 11.55, 17.55 on 114.95kHz, 4010, 6428.5, 9277.5, 12966, 17055.2, 22635kHz — **NPM** (Honolulu): 05.55, 11.55, 17.55 on 131.05kHz, 4525, 9050, 13655, 17122.4, 22593kHz — **NPN** (Guam): 23.55, 05.55, 11.55, 17.55 on 484, 4955, 8150, 13530, 17530, 21760kHz — **NBA:** 04.55, 09.55, 16.55, 22.55, on 147.85kHz, 5448.5, 11080, 17697.5, 22515kHc.

**THE DANISH SHORT WAVE CLUB INTERNATIONAL, Tavleager 31, 2670 Greve Strand, Denmark,** publishes **"SHORTWAVE NEWS"** (intern) and **"KORTBØLGENYT"** for Scandinavia (excl. July). Membership fee per year: D.Kr. 24.00, $ 4.00, £1/5/0, 27 IRC; airmail extra $ 2.25. Payment to K. H. Højlund, Tyge Brahesvej 47, 9000 Aalborg, Denmark.

The SM60 cannot be stereotyped—is equally at home in the studio or in the field—stand-mounted or hand-held—in uses as diverse as outdoor sporting events and elaborate variety shows. Small wonder that audio engineers have called it one of the most versatile omnidirectional dynamics they've ever encountered, for the SM60 is a unique combination of good-looks, strength, performance and economy.

The smooth, wide-range response provides cleanest, natural reproduction of both speech and music. A very effective built-in wind and "pop" filter protects against undersirable effects of close-talking.

Lustrous, non-glare metallic finish and tailored-to-the-hand dimensions provide striking on-camera appearance and superior handability. Specially reinforced machined-steel case front is designed to take abuse that would ruin other microphones—you can drop it on its nose without damage to the internal structure! Efficient windscreen and front end are *quickly* and *easily* removable for cleaning.

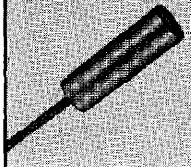
Best of all, it is priced competitively with conventional "workhorse" microphones. Why not check out an SM60 now?

Write for complete information and technical data today, to Shure Brothers, Inc., International Sales, 222 Hartrey Ave., Evanston, Illinois 60204, U.S.A.

**SHURE SM60**

VERSATILE OMNIDIRECTIONAL DYNAMIC MICROPHONE

**THE LAST WORD IN WEARABLE LAVALIER MICROPHONES . . . BY SHURE**



Specifically designed for radio, TV, motion pictures . . . matches well in sound with stand or desk mounted units. Smoothly-contoured, machined-steel case and recessed grille for minimum clothing noise. Exclusive snap-in mounting of microphone for greater convenience, security. "Positive Lock" lavalier goes on in an instant—provides simple, noiseless position adjustment. Extra-flexible, kink-free rubber cable is easily replaceable.

WORLD PUBLICATIONS present

## HOW TO LISTEN TO THE WORLD

This well-known handbook will help you with your hobby and enable you to understand and to solve all your problems. In the following we mention as examples a few of the subjects covered:

**The art of listening to the world**
A complete non-technical description of all problems connected with world-listening.

**The radio frequency spectrum**
By L. J. Prechner, B.Sc., BBC, Engineering Division. A survey and explanations about the use of all the radio frequencies in the radio frequency spectrum.

**Most suitable metrebands**
Described and explained in text and tables for each part of the world by Mr. Roger Legge, Frequency Division, Voice of America.

**Interference and you**
By S. B. Duke, Supervisor Radio Canadas Engineering Division. Description of the different types of Interference.

**Interference protection**
By Hans-Joachim Felbick, Deutsche Welle. A description on how to reduce interference and how to build antenna filter.

**Principles for all receiver types**
Selection of a receiver for a particular purpose. Understand the limitations and the capabilities of a receiver.

**Methods for receiver calibration**

**How to identify stations and what to listen for**
A survey about Identification, program details and about how to report.

**How to write a report to stations**

**How to use a taperecorder**

**Improve medium wave reception**
and how to build a loop aerial.

**Listening to the amateurs**

**Listening to the Continents**
Africa, Latin America, Pacific and No. America.

**Listening to Satellites**

**Language learning by radio**
How you can learn English, Dutch and Japanese.

**The buyers guide**
A list of the world's leading Electronic Manufacturers.

**How to "see" the world**

**On the way to global TV**

Please write for brochures.
Price: Da.Kr. 22.50, US $ 3.25, £ 1/6/0, DM 14.50, Sw.Kr. 16.50. Postage extra: Da.Kr. 2.75, US $ 0.40, £0/3/0, DM 1.25, Sw.Kr. 1.25.

**Obtainable from your bookseller or direct from**

★ **Sveriges DX-förbund** är en sammanslutning av flertalet svenska DX-klubbar. Varje månad utges ETER-AKTUELLT, en riktig, tryckt DX-tidning med bl. a. nybörjarsidor, Special-DX-sidor från Latin-America, Asien och Africa, tipssidor både för nybörjare och avancerade, QSL-nytt, stations-presentationer, samt naturligtvis senaste nytt från alla områden inom DX-hobbyn. Sänd ett 45-öres frimarke för ett provnummer och alla upplysningar till: **Sveriges DX-förbund**, Box 19008, Malmö 19.

★ DX-ers outside Scandinavia are invited to join the SWEDISH DX ASSOCIATION, International dept. — a link between dx-ers all over the world and the Top-quality Swedish DX-magazine ETER-AKTUELLT. Sample copy, and all information about SDXA, against 1 IRC. Write to: SDXA, International dept., Landskrona, Sweden.

# EBU REVIEW

Published in English and French by the European Broadcasting Union

**Part A — Technical** will keep you informed of all new technical developments in sound and television broadcasting.
— Articles written by specialists describe typical new installations, new operational methods and research work undertaken by the broadcasting organisations.
— The "International News" section is devoted to news items reported by EBU Members concerning the installation and operation of transmitting stations and studio centres, recording equipment and outside broadcasting facilities, both for sound and for television.
— Each number gives a summary of the changes that have taken place during the previous two months in the spectra of the long, medium and metric (FM) sound broadcasting wavebands and of the television wavebands.

**Part B — General and Legal** — brings you authoritative reports on radio and television developments throughout the world in the non-technical fields. Specialists write on the latest trends in

programming, administration, and planning,

activities are reported from the international sphere, and from broadcasting organizations in over 50 countries,

experts analyse legislation and jurisprudence touching on broadcasting, new Copyright Acts, etc.,

special numbers give in-depth coverage of key subjects, including educational broadcasting, graphics and design, news programming, religious programming, Eurovision developments, and agricultural broadcasting.

**ANNUAL SUBSCRIPTION**

**Part A** (six numbers): 230 Belgian francs. Publishers: EBU Technical Centre, 32 Avenue Albert Lancaster, Brussels, Belgium.
**Part B** (six numbers): 20 Swiss francs. Publishers: EBU Administrative Office, 1 rue de Varembé, CH-1211 Geneva 20, Switzerland.
**A combined subscription to Parts A and B** (12 numbers) may be ordered either from Brussels or Geneva (price 420 Belgian francs or 36 Swiss francs).

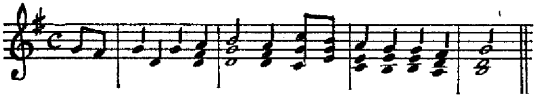
*Sat and Sun only (test).
Each broadcast consists of ¾ h Danish followed by ¼ h English or Spanish, and a news bulletin is the first item on the prgr. Emphasis is laid on cultural and social material, on aspects of the many facets of life in Denmark, Danish relations with the rest of the world, and also included in the prgr's are classical and light music, a DX prgr. "DX Window", topical events and mailbag get-togethers.
**INT-SIG & ANN:** Danish tr's preceded by repetition of first bars of Danish National song by Carl Nielsen:



followed by the words: "Danmarks Radio". The English tr's begin with: "This is Denmark".
**Message to Listeners:** Radio Denmark is anxious to receive reports on prgr. and on reception conditions from all parts of the world. It makes every endeavour to get into touch with countrymen and listeners in countries abroad with a view to provide the best possible sw-sce — **V.** by letter or QSL-card. Recordings accepted — **PUB:** "Voice of Denmark" (quarterly) mailed upon request — **ALF:** Kr. 55,-(radio).

# telecommunication journal

**In the increasingly international age in which we live, it is more important than ever that everyone connected with radio should be in touch with authoritative world opinon on radio matters.**
**The Telecommunication Journal, the official organ of the International Telecommunication Union (ITU), serves just this purpose. Since 1869 (when it first appeared as the "Journal Télégraphique") it has faithfully covered all aspects of telecommunications which come within the purview of the world organization (now a UN specialized agency) set up in 1865 to regulate them.**

The journal contains

- a news section covering the activities of the ITU, of its Member Administrations and of private operating companies and highlighting technical advances in radio throughout the world –
- a list of satellite launchings notified during the previous month –
- a section entitled "Ideas and Achievements" which coversthe major developments of telecommunications in the various Member Administrations –
- articles by world experts, with a heavy emphasis recently on the latest developments in space communications –
- a comprehensive list of articles of telecommunication interest appearing in the scientific press throughout the world –
- official ITU information, including lists of forthcoming ITU Conferences and other international telecommunication meetings –
- monthly sunspot predictions –
- "Telephilately" a section devoted to stamps with telecommunications as their subject –
- section giving details of invitations to tender released by the various Member Administrations concerning telecommunication installations.

It is published monthly by the ITU in separate English, French and Spanish editions.

It costs 2.5 Swiss francs a copy. The annual subscription is 25 francs for one language edition, 50 francs for two and 75 francs for three.

**For further information, write to: Telecommunication Journal, ITU, Place des Nations, 1211 Geneva, Switzerland.**

At the moment the Finnish Broadcasting Company's activities are carried out at over 40 different addresses. This period of being divided will end next autumn with the completion of the new office building, now under construction near the Sibelius Park. The total cubic contents of the building will be 70.000 m³ with seven storeys above the surface and a total area of 17.500 m² Into this building will move the company's administration, the Finnish and Swedish programme sections and the technical department of the sound radio, the economical department, the personnel department, the foreign relations and the information service.

Broadcasting House in Moscow

# THIS IS RADIO MOSCOW!

RADIO MOSCOW can be heard abroad in 58 foreign languages and 10 languages of the USSR on both short and medium waves. All continents are covered.

For the Soviet point of view on foreign affairs and firsthand information on life in the Soviet Union, tune in to RADIO MOSCOW.

Besides the news, reveiws of the Soviet press, talks and interviews, Radio Moscow's external services carry special programmes for youth, features on science and engineering, sports and literature. No less popular is music from Moscow.

RADIO MOSCOW has as its guest speakers top Soviet politicians, public leaders, scientists and artists, as well as visitors from abroad. Discussion forums are a regular feature.

Listeners' letters are answered both on the air and by mail. Request music programmes are featured regularly, and quizes with prizes for listeners are popular.

## TUNE IN TO RADIO MOSCOW!

WORLD PUBLICATIONS present

## WORLD RADIO BULLETIN

The World Radio Bulletin is published twice monthly and contains 8 pages concentrated information on the latest news from Broadcasting Stations throughout the world. The manuscripts are completed few days before printing, which enables you to receive fresh and up-to-date information. It is thus the ideal aid for you.

**A free sample copy is available on request.**

**Prices: Airmail:** Annually Da.Kr. 50.00, US $ 7.30, £ 2/12/0, DM 30.00 — Six months: Da.Kr. 30.00, US $ 4.00, £ 1/12/0, DM 18.00. — **Ordinary mail:** Annually Da.Kr. 33.00, US $ 5.00, £ 1/15/0, DM 20.00 — Six months: Da.Kr. 18.00, US $ 3.00, £ 1/0/0, DM 12.00.

**A favourable proposal:**

The airmail postages are very heavy, therefore we propose you to consider the following: If you have one or more interested friends and we can be allowed to send more bulletins to the same address, we will be able to reduce the prices considerably. For instance: for two annual subscriptions by airmail the price will be only: Da.Kr. 38.00, £ 2/0/0, US $ 5.75, DM 22.50.

## HOW TO LISTEN TO THE WORLD

We have a few copies left of the 1966 edition, which is similar to the current edition and contains a wealth of interesting and for the world listeners very valuable articles written by experts. There is only a few copies left so we advise you to write to us very soon. The price is only: Da.Kr. 13.00 or US $ 1.75, £ 0/15/0, DM 7.75, Sw.Kr. 10.00 plus postage: Da.Kr. 1.85, US $ 0.25, £ 0/1/9, DM 1.00, Sw.Kr. 1.25.

Also a few copies of the following elder publications are for sale:

**WORLD MEDIUM WAVE GUIDE 1965 and 1966**
**NEWS FROM AROUND THE WORLD 1965**
**WORLD RADIO TV HANDBOOK 1964**
**HOW TO IMPROVE YOUR S.W. RECEPTION**
**TRANSISTORS—THEORY AND PRACTICE**
**WORLD VALVE HANDBOOK**

Prices each: Da.Kr. 7.00, US $ 1.00, £ 0/8/0 + postages.

**Please write for brochures.**

**Obtainable from your bookseller or direct from**

**WORLD PUBLICATIONS**

**Lindorfsallé 1, Hellerup, Denmark**

**USA agency: Gilfer Associates, Box 239, Park Ridge, New York, USA**

**England agency: Wm. Dawson and Sons, Cannon House, Macklin Street, London, W.C.2**

### ARMED FORCES RADIO AND TELEVISION SERVICE

**ADDR:** Deputy for Armed Forces Radio and Television, Office of Information for the Armed Forces, ASD(M), Washington, D.C. 20305 — **L.P:** Dir: John C. Broger; Deputy for Armed Forces Radio and Television: Col. Robert Cranston, U.S.A. This office exercises over-all policy control of the Armed Forces Radio and Television Service (AFRTS). The mission of AFRTS is to keep U.S. service-men informed on current events. **All broadcasts are in English.** News, Sports and other timely information is beamed overseas by shortwave tr's on the U.S. Atlantic and Pacific Coasts and a relay tr. in the Philippines. These sw-tr's serve the overseas stations and ships at sea which relay them locally. Programs other than news and locally produced programs are derived directly from the U.S. Commercial radio and TV networks. These programs are transcribed or kinescoped and shipped to the overseas stations by the Armed Forces Radio and Television Service, Los Angeles, California. **L.P:** Officer-in-Charge: Col. Robert R. Eby, USAF.

**WORLDWIDE SERVICE** (from Washington, D.C.)
**ADDR:** Armed Forces News Bureau, 1117 North 19th Street, Arlington, Virginia 22209. **L.P:** Chief: K. H. Logie.

**Purpose:** The purpose of the Association is to foster and promote the development of the arts of aural and visual broadc. in all its forms to protect its members in every lawful and proper manner from injustices; to do all things necessary and proper to encourage customs and practices which will strengthen and maintain the broadc. industry to the end that it may best serve the public.

**L.P:** Chmn: J. F. Dille, Jr. Pres: V. T. Wasilewski. Vice-Pres. Radio: Sherril Taylor. Secr. Treasurer: E. E. Revercomb.

### COMMERCIAL STATIONS

Within the United States, the power of a radio station is often not as important to listeners as its programming. In most major cities, radio stations concentrate their programming to appeal to a given segment of the population and there's a type of programming available to appeal to almost every listening taste. There are stations that devote their entire broadcast day to news, others that devote their time to talk programs. In most cities, the station with the largest listening audience is that station which aims its programming to teenagers and young adults — primarily the people who buy single 45 rpm records. These are mostly rock 'n' roll records and the stations base their programming on Billboard Magazine's Hot 100 Chart, which lists the top-selling single 45 rpm records in the nation. Other radio stations program music to appeal to young adults and adults and their music is selected from Billboard's Top 40 Easy Listening Chart. These "good music" stations usually have the major part of the radio listening audience during morning and early afternoon listening hours before teenagers get out of school.

There are also radio stations that program nothing but country music, others that program Latin American music, others that feature rhythm and blues (aimed primarily at Negro listeners), many that program religious services and religious music, a few that feature mostly jazz, a few that program "background" — or soft relaxing — music, and a good many that program nothing but classical music.

In many cases, the signal of a radio station is directional, meaning that reception is better in the direction the station is aiming its signal. KWKH in Shreveport, La., for example, is heard throughout the South at night and clearly in states like New Mexico and Arizona, but doesn't do too well in a northward direction. (KWKH's daytime signal is non-directional). WLAC in Nashville, Tenn., on the other hand, has a signal that ranges far into northern states at night.

Most radio stations, because of the better broadcast conditions, cut down their power at night. In the case of KBAT in San Antonio, Tex., the 50kW station has a non directional signal in the daytime, but drops to 10kW and a directional signal at night.

Because many radio stations are limited to daytime operation only on AM, a large number of these stations round out a broadcast schedule through an affiliated FM radio station. For instance, 50kW WJJD in Chicago, Ill., has to leave the air at sunset, but local country music fans can turn afterwards to WJJD-FM, which operates 5 am. to 2 am. During the time the AM station is on the air, the two stations simulcast programming.

Following is a list of MW station operating with 10kW power or more. Not only is the address of the station provided, but its principal official, its operational hours (local time), and, where the station is known for one type of programming, the kind of programming available on the station.

**NB:** Clear channel st's are listed in fat types.

# U.S.A. — United Nations

Formed in 1925 as the Association of College and University Broadcasting Stations, the National Association of Educational Broadcasters today includes four divisions — the Educational TV Stations, National Education Radio, Instructional Division (through which the NAEB serves universities, colleges, schools and educational organizations which operate licensed or closed circuit stations) and the Individual Member Division (which serves the professional career needs of those in educational broadcasting). Since 1950, the NER division has operated a tape network, supplying member st's with programming material not only from member st's but also from domestic and foreign producers like the BBC, the CBC, the RAI, Radio Nederland, Radio Belgium, and the French Broadcasting System. The ETS division operates the ETS Program Service, located at Indiana University, to make available outstanding locally-produced programs on a nationwide basis. This service, together with that of National Educational TV, an independent organization primarily responsible for production and distribution of cultural and public affairs, programmes, provides educational TV stations with programming. The ETS division also publishes a monthly newsletter for ETV station managers — The ETS News.
There are now 163 radio st. members, 134 TV st. members. In addition, the NAEB has 2400 individual members. Accord.ng to FCC regulations, non-comm. educational FM st's have no restrictions on transmission time.

### NATIONAL ASSOCIATION OF FM BROADCASTERS

**ADDR:** 45 W. 45th St, New York, N.Y. 10036.
**L.P.:** Chmn. of the Board: Elmo Ellis. Pres: Abe Voron. Exec. Secr: Edward S. Kenehan. Dir. of Adm: Lois Heuer.
**Purpose:** To promote the FM medium. The NAB has an FM division, but a group of young, energetic FM broadcasters formed the NAFMB, seeking to improve the medium faster. One of their all-out campaigns during the past year, for example, was to get more radios capable of receiving FM in cars and this campaign has been very successful. Under strong leadership and the active interest of its members, FM radio has made long strides in the past year or so. FM, for the first time, is being accepted as commercial radio by advertisers. Also, FM radio now features all kinds of formats, even rock'n'roll; it is no longer the quality medium for the élite or the music buff; it is a mass-medium for everyone. There have also been strides in stereo, and 605 FM st's now broadcast in multiplex stereo, according to the NAFMB, with more stations changing to stereo every day.

### GOVERNMENT AGENCY:

**THE FEDERAL COMMUNICATIONS COMMISSION (FCC)**— the licensing agency for broadc. st's — **ADDR:** P.O. Dept. Bldg, Washington 20554, D.C. — **L.P. (key officials):** Chmn: Rosel Hyde. Exec. Dir: M. D. Paglin. Secr: B. F. Waple. Chief, Broadcast Bureau: G. S. Smith.
The FCC is an independent Federal agency, composed of seven Commissioners appointed by the Pres. by and with the advice and consent of the Senate. One of its major activities is the general regulation of broadc. — now visual as well as aural. This regulation may be divided into three phases: 1) The allocation of spectrum space to the different types of broadcast services, 2) Considerations to build and operate individual stations, 3) Regulating their operation.
**Call letters.** — International agreement provides for the national identification of the radio st. by the first letter or first two letters of its assigned call signal, and for this purpose apportions the alphabet among different nations. USA st's use the initial letters K, N, and W, exclusively, and part of the A series. Broadcast st's are assigned call letters beginning with K or W. Generally speaking, those beginning with K are assigned to st's west of the Mississippi River and in the territories and possessions, while W is assigned to broadcast st's east of the Mississippi.

**Number of broadc. st's in the USA as of June 1st, 1967.**

| | Authorised | Operating |
|---|---|---|
| AM | 4219 | 4116 |
| FM Commercial | 1925 | 1630 |
| FM Educational | 342 | 302 |
| TV Commercial | †786 | 587 |
| TV Educational | 181 | 99 |
| TV Translators | 2177 | 1984 |

† Of the 786 authorized commercial TV stations, 519 are VHF, 267 are UHF.

## UNITED NATIONS

### UNITED NATIONS RADIO

**ADDR:** United Nations, New York. **Cable:** Unations, New York. **Te:** Plaza 4-1234. Telex 222422 — **L.P:** Officer-in-Charge, Office of Public Information: J. Rolz-Bennett. R. & Visual Services Div: Dir: J. d'Arcy. Deputy Dir: D. Ritchie. Chief of Operations & TV: M. Hayward. Chief of Radio: P. Jankowski. Mgr. Technical Operations: J. C. Nichols.

## United Nations — Cuba

Prgr's from the United Nations are broadcast by st's in more than 120 countries and territories. The times of these broadcasts may be ascertained from local newspaper or from the stations concerned — R. st's in the US and Canada receive the prgr's direct by line from the Nations Headquarters or by recording — The R. and Visual Services Division prepares and distributes recorded prgr's in Amharic, Arabic, Bengali, Chinese, Duri, Dutch, English, French, German, Greek, Hebrew, Hindi, Hungarian, Indonesian, Italian, Malay, Malgache, Persian, Polish, Portuguese, Pushtu, Russian, Serbo-Croat, Sinhalese, Spanish, Swahili, Tagalog, Thai, Turkish and Urdu.
Letters from listeners are welcome.
New listeners are sent some general information about the United Nations upon request — Correspondence and request for particulars of the United Nations broadcasts from Headquarters should be addressed to: Radio and Visual Services Division, United Nations, New York.

# CENTRAL AMERICA

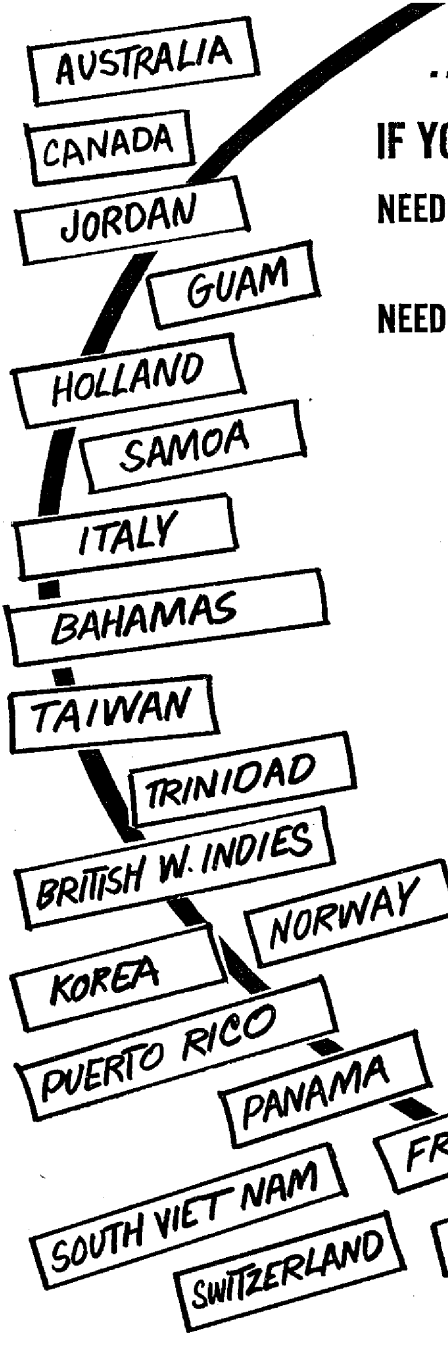
# RSI Record Sourc



*...now serving over 8,000 radio station*

## IF YOU, MR. BROADCASTER...

**NEED** a central source of new American record product: singles and albums — monaural and stereo — by all artists — on all labels — and in all music categories

**NEED** the time-saving services of authoritative, expert reviewers to listen to, evaluate, and select only the best of the more than 200 singles and 120 albums released every week of the year

## THEN YOU

**Serving the musical needs of broadcasters the world over—through the cooperation of all U.S. record labels. And providing only the best of the massive output of new record product—**

RSI Services are available on a weekly (singles) or monthly (albums) subscription basis for the best of the newly released records... or on an individual selection basis for new and catalog product... shipped to any part of the world via surface mail or air mail.

# International

*45 countries throughout the world.*

**NEED** a central source of "standards" and catalog product from which to pick and choose for additions to your library or replacement of worn records

**NEED** a comprehensive service that is tailored to both your budget limitations and your demands for selectivity

## EED RSI

**hrough the selective and astute judgment of he seven-man editorial review panel of Bill-oard Magazine, the world's leading weekly usiness paper for the music-record industry.**

*For full details and a free catalog of rates and services, write:*

**Television on VHF/UHF (Band IV/V) Europe and Africa.**
VHF/UHF television systems for Band IV/V adopted by the European Broadcasting Conference Stockholm 1961 and by the African Broadcasting Conference, Geneva 1963 are 625-lines systems only. These can be grouped into 5 categories, here called Standards G to L:

| Standard | Video Band-width (MHz) | Picture/Sound Separation (MHz) | Vestigial Sideband (MHz) | Picture modulation | Sound modulation | Frequency of chrominance subcarrier (MHz) | Power ratio picture/sound |
|---|---|---|---|---|---|---|---|
| G | 5 | 5.5 | 0.75 | Neg | FM | 4.43 | 5:1 |
| H | 5 | 5.5 | 1.25 | Neg | FM | 4.43 | 5:1 |
| I | 5.5 | 6 | 1.25 | Neg | FM | 4.43 | 5:1 |
| K | 6 | 6.5 | 0.75 | Neg | FM | 4.43 | 5:1 |
| L | 6 | 6.5 | 1.25 | Pos | AM | 4.43 | 8:1 |

| ch | Vision Mc | ch | Vision Mc | ch | Vision Mc | ch | Vision Mc |
|---|---|---|---|---|---|---|---|
| 21 | 471.25 | 33 | 567.25 | 45 | 663.25 | 57 | 759.25 |

| 23 | 487.25 | 35 | 583.25 | 47 | 679.25 | 59 | 775.25 |
| 24 | 495.25 | 36 | 591.25 | 48 | 687.25 | 60 | 783.25 |
| 25 | 503.25 | 37 | 599.25 | 49 | 695.25 | 61 | 791.25 |
| 26 | 511.25 | 38 | 607.25 | 50 | 703.25 | 62 | 799.25 |
| 27 | 519.25 | 39 | 615.25 | 51 | 711.25 | 63 | 807.25 |
| 28 | 527.25 | 40 | 623.25 | 52 | 719.25 | 64 | 815.25 |
| 29 | 535.25 | 41 | 631.25 | 53 | 727.25 | 65 | 823.25 |
| 30 | 543.25 | 42 | 639.25 | 54 | 735.25 | 66 | 831.25 |
| 31 | 551.25 | 43 | 647.25 | 55 | 743.25 | 67 | 839.25 |
| 32 | 559.25 | 44 | 655.25 | 56 | 751.25 | 68 | 847.25 |

The sound carrier frequency for each channel can be determined by adding the appropriate figure to the vision carrier frequency given above (5.5Mc for systems G, H; 6Mc for system I and 6.5Mc for systems K, L). In We. Germany ch38 is reserved for aero-navigation.

**UHF Channels:** USA.

# colour capability

**EMI**TELEVISION colour capability did not happen overnight. There is twenty years of operational experience behind it. One of the direct results is the new **EMI**TELEVISION 2001 Separate Luminance Camera, the finest combination of optical system and pick up tube arrangement ever devised. **EMI**TELEVISION colour capability means much more than a compact, highly efficient camera channel. It means a whole range of compatible solid-state studio and O.B. equipment, a fund of practical experience, and continuous research. This capability is at your service.

Colour television in Britain began on BBC-2 on 1 July, 1967. The colour launching period then opened with a minimum of five hours of colour programmes each week, the hours increasing in a build-up to the start of the full colour service on 2 December 1967, when at least 80 per cent off BBC-2 will be in colour.

# The worlds' finest recording equipment ... by Westrex

There is only one best, and in the sphere of 16/35 mm photo/mag. studio recording and re-recording equipment, Westrex is the one.
Westrex recording equipment is the result of detailed research and development, backed by many years of international experience in producing equipment for the world's finest studios. For example, Westrex equipment is installed at the BBC, Rediffusion television, and MGM Studios, in London: Bavaria Atelier, Munich: Cinetone Studios, Amsterdam: Valentin de Carvalho Studios, Lisbon.
More than thirty years in the lead has given Westrex Engineers all the answers.

During that time the Oscar for the best recording of the year has been won 27 times by films recorded on Westrex equipment.
If you want the best it must be Westrex. Write today for full technical details of Westrex dubbing consoles, review room projection and sound equipment and the name of your nearest Westrex Agent.

The **World Radio TV Handbook** is the only international handbook of its kind.

**World Radio TV Handbook** is used by the managing directors and engineering staffs of radio & television stations. Equipment manufacturers looking for world markets are thus presented with an ideal medium for reaching all their potential customers in this fast growing field.

These facts give authority and weight to a sales message in the **World Radio TV Handbook.** It will help increase your sales because it will reach the technical staffs of radio and television stations, institutions, organizations, amateurs and short wave listeners.
